## DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

CUNAPSOL-1 requires no dilution before use. Use as received, following label directions.

The best results will be obtained if wood to be treated is immersed for 3 minutes or longer. If dipping is not possible, 2 liberal brush or spray applications should be applied. Allow at least 1 hour between applications. Make certain all areas are fully treated to get maximum benefits. Allow 24 hours or longer after application of the preservative prior to painting. Cleanup with soap and water.

Wood treated with CUNAPSOL-1 WOOD PRESERVATIVE has a green color that fades slowly over time. Coverage varies from 100-300 square feet per gallon.

## RECOMMENDED FOR

Windows, window frames, doors, stairs, porches, siding, shingles, trellises, steps, subflooring, interior trim, wall paneling, furniture, fence pickets and rails, furring strips, arbors, flooring and beverage cases. Powder post beetles which invade furniture, flooring and structural lumber are killed by application of this preservative. These insects will not attack the treated wood. CUNAPSOL-1 protects wood against mold and mildew.

CUNAPSOL-1 may also be used on fence posts, poles, foundation sills, decks, boats, and all wood exposed to moisture or weather. However, for ground contact use, wood should be soaked 12 to 48 hours in CUNAPSOL-1.

Due to its very low phytotoxicity, CUNAPSOL-1 can be used to treat wood for greenhouses, nursery flats, etc.

In addition to preventing decay, blue stain, and insect attack on wood, CUNAPSOL-1 controls warping, swelling, shrinking and end checking caused by changes in moisture content of lumber and plywood products.

Wood to be protected against subterranean termites should be treated before use in construction. Termites will not attack wood treated with CUNAPSOL-1 Wood Preservative.
