

PROXOL 80 SP INSECTICIDE

New Reduced Rates For Turf Insect Control

Proxol 80 SP Insecticide now has label approval for control of cutworms, sod webworms and armyworms on turf at new reduced rates. The new recommended rate is as follows:

For Tees, Greens, Fairways, Lawns and Other Fine Turf Areas

Insects	Rate		Application
	Area	Amount	
Cutworms	1,000 sq.ft.	1 1/2 - 3 3/4 ozs.	Apply by means of any commercial power ground sprayer. Do not use Proxol 80 SP in hose proportioners. <u>For greens or other small areas -</u> Mix specified amount of Proxol 80 SP in 5 to 10 gallons of water and apply uniformly to 1,000 sq. ft. <u>For fairways and larger areas -</u> Apply specified amount using sufficient water for complete coverage but not less than 10 gallons per acre. For best results, mow the turf and rake dead grass from damaged spots; water the turf and allow to dry before spraying. Do not water again until necessary. Apply Proxol 80 SP when insect population reach levels sufficient to warrant control measures.
Sod Webworms	5,000 sq.ft.	1/2 lb.	
(lawn moths)	10,000 sq.ft.	1 lb.	
	20,000 sq.ft.	2 lb.	
Armyworms	30,000 sq.ft.	3 lb.	
	40,000 sq.ft.	4 lb.	
	1 acre	5 lb.	
White grubs	1,000 sq.ft.	3 3/4 oz.	Mix specified amount of Proxol 80 SP in 15 to 30 gallons of water and apply uniformly to 1,000 sq.ft. of turf. Thoroughly irrigate turf immediately after application.

The new reduced rate of 1 1/2 ozs. Proxol 80 SP has been tested and found to be effective in controlling cutworms, sod webworms and armyworms. When severe, high population outbreaks occur the maximum suggested rates are applicable.

The new 1 1/2 ounce recommendation offers the following advantages:

1. Flexibility that enables dosage to be adjusted according to insect pressures.
2. Convenience of Proxol 80 SP to be programmed with turf fungicides on an alternate weekly basis to provide economical preventative protection.
3. Improved economics in spraying of fairways and other large turf areas.
