FIRST AID - ANTIDOTE

INTERNAL: Give sodium chloride 15 g. (one tablespoonful of table salt) in glass of warm water and repeat until vomit is clear.

EXTERNAL: Wash with soap and water.

CALL A PHYSICIAN IMMEDIATELY.

PHYSICIAN'S NOTE: Toxaphene produces central nervous system excitation which responds to barbituric acid derivatives. Prevent or control convulsions with barbiturates, preferably administered intravenously. If the barbiturate can be given before convulsions start, sodium pentobarbital is the drug of choice. Since toxaphene has a fairly long duration of action, a long-acting barbiturate such as phenobarbital may be used after initial control of convulsions. Refer to "Clinical Handbook on Economic Poisons," which was prepared by the U. S. Department of Health, Education, and Welfare, Public Health Service, Communicable Disease Center, Atlanta, Georgia.

NOTICE TO DRUM HANDLERS: IN CASE OF FIRE, LEAKY OR DAMAGED DRUMS, OR OTHER EMERGENCY - REPORT AT ONCE BY TELEPHONE, COLLECT, TO:

Hercules Incorporated, Wilmington, Delaware (Area Code 302) 654-8900 for Emergency Assistance.

Do not re-use empty container. Destroy promptly by crushing and burying away from water sources. Large drums may be returned to recondition.
