FOGGING INSECTICIDE MALATHION

For use against mosquitoes, flies and gnats on lawns, golf courses, resort recreation areas, campsites, in outdoor theaters, sports stadia, garbage and sewage disposal plants, factories, warehouses and stores.

Effective fogging calls for careful attention to weather conditions. The maximum wind velocity should not exceed 3 to 4 miles per hour for the fog to be effective. Best results are obtained in still air with thermal air currents absent. High humidity also enhances the effectiveness. Fogging applications from dawn to 6 A.M. during the summer months and again in the evening during twilight and on into the night are generally most effective.

Use at a rate of 2 gallons per acre, or 1 gallon per 50,000 cubic feet of space.

MOSQUITOES AND GNATS: Use a coarse or "wet" fog. Cover entire area.

FLIES: Use a fine or dry fog for controlling flies.

CAUTION

KEEP OUT OF REACH OF CHILDREN

Do not spray near open flame. Do not smoke while spraying. Harmful if swallowed. Avoid breathing of spray mist. Avoid contact with skin; wash thoroughly after using. Avoid contamination of feed and foodstuffs.

Do not re-use empty drums. Return to drum reconditioner or destroy by perforating or crushing and burying in a safe place.

This product is toxic to fish. Keep out of lakes, streams or ponds. Do not contaminate water by cleaning of equipment, or disposal of wastes. Apply this product only as specified on label.

ACTIVE INGREDIENTS 100%

Petroleum distillate, malathion (O, O-dimethyl dithiophosphate of diethyl mercaptosuccinate) and beta-butoxy beta'-thiocyano diethyl ether.
