DIRECTIONS

BEFORE USE, READ DIRECTION, WARNING AND NOTICE STATEMENTS CAREFULLY

ADD 1 GALLON OF THIS CONCENTRATE TO 36 GALLONS OF WATER TO MAKE A 0.5% SOLUTION

Foundation Application: Dig a trench 6 inches wide and 1 foot deep along entire perimeter of foundation walls, around plumbing, piers, etc. in un-excavated areas and apply solution at the rate of 5 gallons for each 10 lineal feet of trench. In excavated areas the trench should be 2½ feet deep on the outside of foundation and 1 gallon of solution applied for each lineal foot. Bottom of trench should not be lower than top of footings. Mix solution with soil as it is replaced in trenches

Pre-Treatment Application Under Slabs: Apply an overall treatment under entire surface of floor slab including porch floors and entrance platforms. Apply solution at the rate of 1 gallon per 10 square feet, except that if fill under slab is gravel or other coarse absorbent material, apply solution at the rate of 1½ gallons per 10 square feet. Apply 2 gallons solution per 5 lineal feet to critical areas under the slab such as along the inside foundation walls and around utility entrances and interior partition foundation walls. Apply 2 gallons solution per 5 lineal feet along outside foundation using a trench to the depth of the foundation. Where finished rooms are provided in basements or below grade areas, apply an overall treatment under entire surface of basement floor at the rate of 1½ gallons solution per 10 square feet.
