CITCO
COPPER
SULFATE
LARGE BRIKS

NET WT. 100 LBS.

COPPER SULFATE LARGE BRIKS

ACTIVE INGREDIENT:
COPPER SULFATE (PENTAHYDRATE)99%
COPPER EXPRESSED AS METAL25.2%
INERT INGREDIENT 1%
P10

**FOR MANUFACTURING, REPACKAGING, FORMULATING
AND OTHER INDUSTRIAL USES
FOR ALGAE CONTROL SEE DIRECTIONS
DIRECTIONS**

TO CONTROL ALGAE IN IMPOUNDED WATERS, LAKES, PONDS, AND OTHER
RESERVOIRS, see our Booklet 25A for detailed instructions. Apply the lowest rate
necessary to control problem algae. Treatment of algae can result in oxygen loss from
decomposition of dead algae. This loss can cause fish suffocation. Therefore, to mini-
mize this hazard, treat 1/2 inch of the water area in a single application and wait 10 to 14
days between treatments. Apply the material during the day and, if needed, outdoors in
batches to algae beds to move into untreated areas.

TO CONTROL ALGAE IN FERTIGATION AND IRRIGATION SYSTEMS, apply the
ALGAE CONTROL METHOD described in the label. The lowest application
rate of 1/2 lb. per acre will control most algae. Treat with frequent
applications every 2 weeks as needed. A single application will not
control water hardness, alkalinity and require the use of other sulfate containing
products. As the product is used, the water hardness and alkalinity required
when the product is used is about 100 ppm as CaCO₃.

NOTE: Do not use this product in fish ponds or other aquatic environments.
This label applies only to the use of this product in the control of algae.
When the product is used in the control of algae, it is not to be used in the
control of other algae or in the control of other aquatic organisms.

CAUTION: Keep this product out of the hands of children. Do not
contaminate water by leaking or spilling. Do not dispose of wastes.

Do not reuse container. Destroy when empty.

Label guarantee states that the product is safe and effective for the
control of algae. Any risk to the user is properly listed on the label and
accepted by the user in these conditions.
