I.C.C.: Insecticide, O.T.A.

Sold By:

VAPORKILL is a concentrated insecticide for use in control of listed pests under directions of flying crawling and hopping stages of certain insect life. Especially compounded for use by food processing establishments, canneries, wineries, bakeries, restaurants, parks and accessible stages of flies, mosquitoes, gnats, ants, roaches, silverfish, crickets, spiders, scorpions, wasps, hornets, flying moths, skippers, grain weevil, rice weevil, confused flour beetle, cadelle, meal worms, angoumois grain moths, grain mites and Mediterranean flour moths. Vaporkill is a control only the exposed stages of the listed insects. Infested stored food products should be fumigated or treated by other effective methods using an approved product intended for this purpose.

DIRECTIONS

SURFACE TREATMENT – For control of the accessible stages of flies, mosquitoes, gnats, ants, roaches, silverfish, crickets, spiders, scorpions, wasps, hornets, flying moths, skippers, grainary weevil, rice weevil, confused flour beetle, cadelle, meal worms, angoumois grain moths, grain mites, Mediterranean flour moths, running insects, use a machine adjusted to deliver coarse wet particles. Direct spray onto exposed surfaces of walls, floors, baseboards, cupboards, shelving. Use a rate of 1 gallon per each 1,000 sq. ft. of surface area. Apply liberally, paying particular attention to cracks, crevices and other hiding places.

SPACE SPRAYING – For rapid control of the flying insects, mosquitoes, gnats, wasps, hornets and flying moths, use in a machine adjusted to deliver to a fine mist. Direct spray towards upper portions of the room. Fill the room with mist using 1 to 2 oz. per each 1,000 cu. ft. of space. Where possible, keep room closed for 15 minutes after spraying. Do not remain in treated areas and ventilate the area after treatment is completed. Insecticide use rates vary with different types of thermal fog generators, but most units are designed to give most effective results when this material is used at the rate of 1 pint per each 12,000 to 14,000 cu. ft. of space. Foods should be removed or covered during treatment.
