

PRECAUTIONARY STATEMENTS

Hazards to Humans And Domestic Animals

DANGER: Highly corrosive. Causes skin and eye damage. May be fatal if swallowed. Do not get in eyes, on skin or on clothing. Wear goggles or face shield and rubber gloves when handling. Irritating to nose and throat. Avoid breathing dust. Remove and wash contaminated clothing before reuse.

Environmental Hazards

This product is toxic to fish. Do not discharge into lakes, streams, ponds, or public waters unless in accordance with an NPDES Permit. For guidance, contact the regional office of EPA.

Physical and Chemical Hazards

Strong Oxidizing Agent: Mix only with water. Use clean dry utensils. Do not add this product to any dispensing device containing remnants of any other product. Such use may cause a violent reaction leading to fire or explosion. Contamination with moisture, organic matter, or other chemicals may start a chemical reaction, with generation of heat, liberation of hazardous gases, and possible generation of fire and explosion. In case of contamination or decomposition, do not reseal container. If possible, isolate container in open air or well ventilated area. Flood with large volumes of water, if necessary.

LESLIE'S SUPER 90

Active Ingredient:

Trichloro-s-triazinetriene..... 100%
Available chlorine — 90%

Keep Out of Reach of Children

DANGER

Practical Treatment: (First Aid): If swallowed, feed bread soaked in milk followed by olive oil or cooking oil. Call a physician immediately.

If on Skin: Brush off excess chemical and flush skin with cold water for at least 15 minutes. If irritation persists, get medical attention.

If in Eyes: Flush with cold water for at least 15 minutes. Get medical attention.

SEE ADDITIONAL PRECAUTIONS ON SIDE PANEL

EPA Reg. No. 11411-7
EPA Est. No. 11411-CA-1

Net Wt. 10 lbs.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Directions

When starting up a new pool, superchlorinate to satisfy chlorine demand to establish a chlorine residual of 1.0 ppm to 2.0 ppm available chlorine. Use 3 ounces of this product per 10,000 gallons of water as determined by a suitable test kit. A test kit must be used to determine when it is necessary to add another dose of Leslie's Super 90. Maintain the residual of 1.0 to 2.0 ppm of available chlorine to average is 2 to 3 ounces of this product per 10,000 gallons. pH should be maintained between 7.2 and 7.6. For best results, shock should be added through skimmer. A shock treatment should be made every week during heavy rains. Less frequent shock treatments may be made. The shock treatment may consist of super-chlorinating with chlorine or repeated doses of 3 ounces of Leslie's Super 90. A residual of 1.0 ppm to 2.0 ppm available chlorine is established. Swimmers should not be permitted in the pool after treatment until the chlorine residual is below 2.0 ppm. Keep in mind that a slight flexibility must be maintained in the pool to avoid accumulations of dust and dirt caused by storms or superchlorination. These require additional dosages to maintain the chlorine residual at 1.0 ppm and 2.0 ppm as determined by a chlorine test kit.

DO NOT USE IN VINYL LINED POOLS OR HYPOCLORITE

Storage and Disposal

Keep product dry in tightly closed container when not in use. Store in dry, well-ventilated area away from heat or open flame. In case of spill, isolate container, if possible and flood with large volumes of water. Dissolve all material before discarding. Place in trash collection approved landfill area, or bury in a safe place.

EPA Reg. No. 11411-7
EPA Est. No. 11411-CA-1

Net Wt. 10 lbs.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent
with its labeling.

Directions

When starting up a new pool, superchlorinate to satisfy chlorine demand and
to establish a chlorine residual of 1.0 ppm to 2.0 ppm available chlorine.
Use 3 ounces of this product per 10,000 gallons of water as an initial treatment.
Repeat until a residual of 1.0 to 2.0 ppm of available chlorine is established as
determined by a suitable test kit. A test kit must be used regularly to deter-
mine when it is necessary to add another dose of Leslie's Super 90 to main-
tain the residual of 1.0 to 2.0 ppm of available chlorine to the pool water. An
average is 2 to 3 ounces of this product per 10,000 gallons of water daily. The
pH should be maintained between 7.2 and 7.6. For best results, this product
should be added through skimmer.

A shock treatment should be made every week during hot weather or after
heavy rains. Less frequent shock treatments may be made during cool weather.
The shock treatment may consist of super-chlorinating with sodium hypo-
chlorite or repeated doses of 3 ounces of Leslie's Super 90 until a chlorine
residual of 1.0 ppm to 2.0 ppm available chlorine is established.

Swimmers should not be permitted in the pool after the shock treatment
until the chlorine residual is below 2.0 ppm.

Keep in mind that a slight flexibility must be maintained in the event of heavy
accumulations of dust and dirt caused by storms or super heavy bathing loads.
These require additional dosages to maintain the chlorine residual between
1.0 ppm and 2.0 ppm as determined by a chlorine test kit.

DO NOT USE IN VINYL LINED POOLS OR HYPOCHLORINATORS

Storage and Disposal

Keep product dry in tightly closed container when not in use. Store in a cool,
dry, well-ventilated area away from heat or open flame. In case of decompo-
sition, isolate container, if possible, and flood with large amounts of water to
dissolve all material before discarding. Place in trash collection or dispose in
approved landfill area, or bury in a safe place.
