

COMBUSTIBLE Do not use near heat or open flame.

Be sure spray tank is clean and free from all lime sulphur.  
Never use lime sulphur with DENDROL they do not mix.

Do not use in the Delayed Dormant later than when the leaves are out  $\frac{1}{4}$  inch. On apple trees do not use over 2% in advanced Delayed Dormant.

Do not use in the summer on fruit or shade trees.

Do not use in the Delayed Dormant on peach trees or at more than 4% strength in the dormant period.

Spray thoroughly but avoid overspraying or drenching when using high concentrations.

Do not apply DENDROL or any other oil spray when the temperature is below 40°F. or at any time when there are indications that it may fall to freezing or below within 24 hours after spraying.

Spring Dormant spraying is advised as it is safer and more effective. However, in areas where fall spraying with oil is generally practiced DENDROL is one of the best and safest materials to use.

Spraying in late winter or too early in the spring is about as hazardous as fall spraying. It is best to wait until winter is definitely over (as close as possible to actual start of bud growth in the spring).

Do not use on sugar (hard) maples

When evergreens are exposed to heavy spray drift or run-off of spray from other trees, protect with covering until spraying and drip are over, or wash evergreens with clear water immediately after such exposure.

Use only home prepared Bordeaux, made from good quality fresh ingredients. Some ready made Bordeaux powders or other proprietary copper compounds will mix well with this product, others may not.
