

DIRECTIONS FOR USE

The lower dosages will usually be satisfactory only for young, succulent growth of sensitive species such as mustard. For less sensitive species and under conditions where kill is difficult, use the higher dosages.

Mix Only with Water. Unless otherwise directed, use the recommended amount of Gavamine D-40 Weed Killer in the amount of water needed for even distribution. In mixing sprays, add half the water to the tank, then add the Gavamine D-40 Weed Killer with agitation and finally the balance of the water with continued agitation. Apply at low pressure (30 to 50 pounds) during warm weather when weeds are young and growing actively.

GENERAL WEED CONTROLS: In vacant lots, on roadsides and along lawns, use enough spray to wet all foliage. 2 quarts of Gavamine D-40 Weed Killer in 100 gallons of water will control most young weeds; however, 3 quarts may be necessary for more resistant weeds. Deep-rooted perennial weeds, such as bindweed and Canada thistle, may require repeated applications as new growth appears.

WEED CONTROL IN CROPS: (See table at right) Small Grains (wheat, barley, oats): Spray when grain is in full tiller stage (6 to 8 inches tall) but weeds are still small. Crop injury may result if application earlier than "tiller" or later than "boot" stage. Pre-harvest treatment to control large weeds may be effective under certain conditions such as adequate soil moisture and succulent weed growth. Apply 1 or 2 pints Gavamine D-40 Weed Killer per acre when grain is in "milk" or "hard dough" stage. Do not use on grain interplanted with a legume, particularly alfalfa and sweet clover, unless injury to the legume can be tolerated. Do not forage or graze treated grain fields within 2 weeks after treatment with 2,4-D. Do not feed treated straw to livestock. Corn: Pre-emergence - Apply to soil 3 to 5 days after planting but before corn emerges. Do not treat very light, sandy soil. Emergence - For broad-leaved weeds, use one pint just as corn plants are breaking ground. Postemergence - On corn over 8 inches tall, use a directed spray. Local con-

ditions may affect the use of herbicides. State agricultural authorities, in many states issue recommendations to fit local conditions. **Rice:** Treat 4 to 8 weeks after emergence. Where flooded, treat between 7 and 9 weeks after seeding, when plants have emerged above water and leaves are standing erect. Grain Sorghums: Treat when 6 to 12 inches tall and secondary roots are well established.

Gavamine D-40 Weed Killer is recommended for controlling alligator weed, dandelion, docks, fanweed, goldenrod, lamb's-quarters, mustards, peppergrass, pigweed, plantains, ragweed, shepherd's-purse, tarweed, thistles, vetch, white top, wild carrot, wild morning-glory, wild radish, and many other broad-leaved weeds without injury to most grasses. Use on lawns, golf courses, parks, playgrounds and other recreational areas; along highways and railroad right-of-ways; on airfields, drainage ditchbanks, pasture lands, around farm buildings, and in the field crops such as listed on this label under "WEED CONTROL IN CROPS".

AMOUNT OF GAVAMINE D-40 WEED KILLER PER ACRE
Read Complete Directions Before Using

Crop (See detailed directions above)	For Average Conditions	For Dry Cond. in West. States*	Gals. of Spray Per Acre
Small Grain:			
Ground application	1 1/2 to 1 pt.	1 to 2 pts.	5 to 25
Air application	1 pt.	1 to 2 pts.	1 to 10
Corn:			
Pre-emergence	1 to 2 qts.		10 to 20
Postemergence	1/2 to 1 pt.	1 pt.	5 to 10
Grain Sorghums	1 pt.	1 1/2 to 2 pts.	5 to 10
Rice	1 to 2 1/2 pts.	2 to 3 pts.	5 to 10

*California, Idaho, Montana, Nevada, Oregon, Utah, Washington and Wyoming.
