

Foremost 1645 is a balanced granular formula of modern detergents, water softeners, and a quaternary ammonium germicide.

Foremost 1645 fulfills the criteria of Appendix F as revised March 12, 1956, of the Milk Ordinance and Code—1953 recommendations of the U. S. Public Health Service, in waters up to 1200 parts per million hardness calculated as CaCO₃ when tested by the method outlined by Chambers.

A General Purpose Cleaner and Sanitizer Recommended for Washing:

- Eggs—Hatchery Equipment
- Poultry Processing Equipment
- Milking Machines and Dairy Utensils
- Livestock and Poultry Buildings
- Food Processing Plants

DIRECTIONS

General Purpose Cleaning and Sanitizing. Make up a solution using one ounce Foremost 1645 per two gallons of water. This solution provides two hundred parts per million of quaternary ammonium germicide.

Rev. 3-65

CLEANER-SANITIZER

Kills Many Bacteria While Cleaning

CAUTION: KEEP OUT OF REACH OF CHILDREN.

MAY BE HARMFUL IF SWALLOWED. Avoid contamination of foodstuffs. Avoid getting solution or compound into eyes. In case of contact flush with water. If irritation persists, get medical attention. Do not use with soap or other Cleaners.

DIRECTIONS—Continued EGG WASHING

Wash eggs as soon as practical after gathering, in a solution using one ounce of Foremost 1645 per three gallons of warm water 110° to 130° F and keep at an even temperature. When handwashing or immersion type machines are used, immerse eggs for three minutes, remove from the solution and allow to drain.

When a separate rinse is used, add one ounce of Foremost 1645 to 5 gallons of water and maintain rinse solution temperature higher than the wash solution. Dry eggs rapidly and store in a cool, damp room.

Cleaning and sanitizing inanimate surfaces in hatcheries, poultry processing plants, livestock and poultry buildings.

Use a solution containing 1 oz. of Foremost 1645 per gallon of warm water (approx. 400 ppm quaternary) for non-porous surfaces. For porous surfaces, use a solution containing 2 oz. of Foremost 1645 per gallon of warm water (approx. 800 ppm Quaternary).

Wash equipment with appropriate solution concentration and rinse thoroughly with clean water before re-use.
