Supersedes Draft Dated 2/22/83

Terraclor® 10% Granular
(EPA Reg. No. 1258-555)

Active Ingredient:

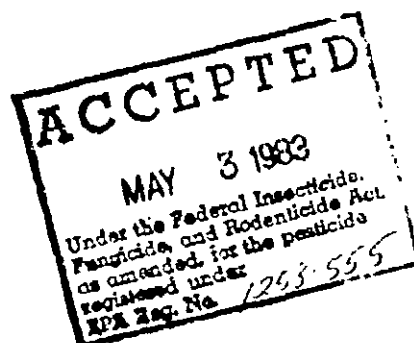

Pentachloronitrobenzene 10%

Amendment
To Previously Registered Labeling

Add the following:

Peanuts - Control of Sclerotium rolfsii (Southern blight, White Mold):

Split Pegging Applications - Apply Terraclor 10% Granular at the rate of 50 lbs. of granules per 14,500 linear feet of row (based on a 36 inch row spacing) as a 12 to 18 inch band centered over the row followed by shallow incorporation if possible. The initial application should be timed to coincide with early pegging. A second application at the same rate may be made if disease symptoms reappear. Depending on weather, this usually occurs 4 to 5 weeks after the first application.
