

DIRECTIONS FOR SWIMMING POOL USE: Easy-to-use, dust free, dependable Olin HTH Dry Chlorine Tablets For Swimming Pools, containing 70% available chlorine, are designed to dissolve slowly (up to 4 hours) and provide a steady source of available chlorine over a period of time. HTH Tablets control growth of algae and effectively kill many bacteria which may be the cause of infections. Seven tablets (approx.) equal 1 ounce.

INITIAL CHLORINATION: For initial chlorination of any pool water, add 1 oz. of HTH Tablets for each 1,000 gallons. Allow 4 hours for the HTH Tablets to dissolve and then test the chlorine residual with a pool test kit and if below 0.6-1.0 ppm repeat this dosage until 0.6-1.0 ppm is obtained.

ROUTINE CHLORINATION DOSAGE: Subsequently add 1/4 oz. of HTH Tablets per 5,000 gallons daily or as often as needed to maintain 0.6-1.0 ppm whether the pool is in use or not. Use a test kit frequently to determine chlorine residual. If any chlorine residual is present, it is possible to increase the residual in pool water by 1.0 ppm by using 1 oz. of HTH Tablets per 5,000 gallons of water. For best results, use a dissolving basket, a floating container, or add the Tablets to a plastic leaf strainer in the surface skimmer. Do not permit Tablets to contact steel or plastic pool linings. Do not throw Tablets directly into pool. HTH Tablets can be added any time, however, early evening is usually the preferred time.

MAINTENANCE OF pH: pH should be maintained in the 7.2-7.6 pH range. Maintaining 0.6-1.0 ppm (parts per million) chlorine residual and 7.2-7.6 pH range will result in clean, sparkling water.

Dry Chlorine is toxic to fish. Treated effluent should not be discharged where it will drain into lakes, streams, or ponds.

DIRECTIONS FOR WADING POOL USE: For initial chlorination of any pool water, add 3 to 4 tablets for each 500 gallons. Allow 4 hours for the Tablets to dissolve and then test the chlorine residual with a pool test kit and if below 0.6-1.0 ppm repeat this dosage until 0.6-1.0 ppm is obtained.

ROUTINE CHLORINATION DOSAGE: Subsequently add approx. 2 to 3 Tablets per 500 gallons daily or as often as needed to obtain 0.6-1.0 ppm chlorine residual whether the pool is in use or not. Use a test kit frequently to determine chlorine residual. To apply approx. 1.0 ppm of available chlorine, add one Tablet per 500 gallons of water. For best results, use a dissolving basket, a floating container, or add the Tablets to a plastic leaf strainer in the surface skimmer. Do not permit Tablets to contact steel or plastic pool linings. Do not throw Tablets directly into pool.

DANGER! FATAL OR HARMFUL IF SWALLOWED. MAY PRODUCE SEVERE CHEMICAL BURNS. DO NOT ALLOW CONTACT WITH EYES, SKIN, MUCOUS MEMBRANES OR CLOTHING. STRONG OXIDIZER, CONTACT WITH OTHER MATERIAL MAY CAUSE FIRE: Keep from contact with clothing and other combustible materials. Do not store near combustible materials. Remove and wash contaminated clothing promptly. While HTH Tablets by itself is not a combustible material, it must not be mixed or contaminated with any foreign material such as household products, soap products, paint products, solvents, acids, pool chemicals, vinegar, beverages, oil, pine oil, dirty rags, etc. Contamination or mixing with these types of chemicals and products may result in fire and the fire can be of great intensity. Prevent any burning material such as a lighted cigarette from falling into product. Drench fires with water. Flush spilled product with water. Dispose of spilled product by flushing with large amounts of water. Keep in cool, dry place in original container. Always replace cap. Wash empty container thoroughly with water and discard. Do not reuse empty container.

ANTIDOTE: External—flood with water for 15 minutes. Internal—drink large quantities of water or milk. Follow with milk of magnesia, vegetable oil, or beaten eggs. Call physician immediately. Eyes—wash eyes with water for 15 minutes. Get prompt medical attention.
