TERRACLO (K) 10% GRANULAR

DIRECTIONS FOR USE

Apply (1 lb. per 100 sq. ft.) of ST. AUGUSTINE GRASS

Brown Patch is caused by a soil-borne fungus which attacks during periods of high moisture level. The disease generally occurs in the Gulf Coast area from September to March or May. The rate of spread varies with the time when the disease is first noticed. A spot 2 or 3 inches in diameter will cover 100 sq. ft. in diameter in 2 or 3 weeks.

For control of infection, Terraclo (K) should remain effective through

(Back - continued).

this season. If, however, a treated area is subjected to unusually heavy irrigation, or rainfall, or flooded, it is suggested that the area be retreated.

APPLICATION: - Apply 7-1/2 lbs. of this product per 1000 square feet of lawn. It may be broadcast evenly by hand or with a fertilizer spreader. Extreme care should be exercised to obtain even coverage for maximum benefit. Following application, the treated area should be watered to insure movement of Terrasol through the grass to the soil.

IMPORTANT NOTICE

Since the use of this product is beyond the control of the seller, seller makes no warranty of any kind, expressed or implied, for the use of this product. User assumes all risk of loss or damage, whether in accordance with directions or not.
