

# Terraclor Super-X

## Seed Treatment

### Fungicide Application

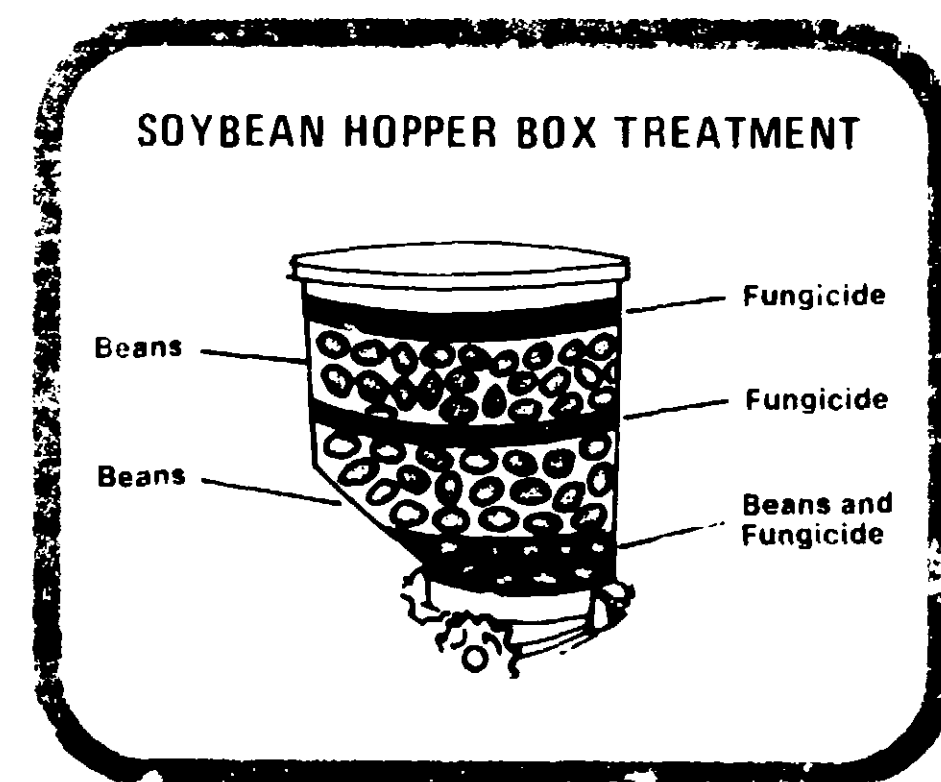

### Directions

Terraclor Super-X Seed Treatment Fungicide should be mixed directly with the seed in the planter hopper box at these rates: One avoirdupois ounce of Terraclor Super-X Seed Treatment Fungicide with each 15 pounds of seed, or 4 ounces per 60-pound bushel of seed.

To get proper mixing in the hopper box, start with 15 pounds of seed in the hoppers. Spread one ounce of Terraclor Super-X over the seed and stir with a clean paddle. Pour in 15 pounds of additional seed and apply another ounce, mixing thoroughly. Continue until the hoppers are full.

When planting starts, do not empty hoppers completely. Refill hoppers when 3/4 of seed has been planted.

Always stir seed gently to prevent injury that could reduce germination. Use a clean paddle or stick for stirring. Keep the container closed when not in use. Do not inhale dust or fumes while mixing.
