

DIRECTIONS FOR WADING OR SWIMMING POOL USE: Easy-to use, dust free, dependable Olin Wading and Swimming Pool to dissolve slowly (up to 4 hours) and provide a steady source of available chlorine over a period of time. Olin Tablets control growth of algae and effectively kill many bacteria which may be the cause of infections.

INITIAL CHLORINATION: For initial chlorination of newly filled pools, add 3 to 4 tablets for each 500 gallons. Allow 4 hours for the Olin Tablets to dissolve and then test the chlorine residual with a pool test kit and if below 0.6-1.0 ppm repeat this dosage until 0.6-1.0 ppm is obtained.

ROUTINE CHLORINATION DOSAGE: Subsequently add 2 to 3 tablets per 500 gallons daily or as often as needed to obtain 0.6-1.0 ppm chlorine residual whether the pool is in use or not. Use a test kit frequently to determine chlorine residual. To apply approximately 1.0 ppm of available chlorine, add one tablet per 500 gallons of water. For best results, use a dissolving basket, a floating container, or add the Tablets to a plastic leaf strainer in the surface skimmer. Do not permit Tablets to contact steel or plastic pool linings. Do not throw Tablets directly into pool.

MAINTANCE OF pH: pH should be maintained in the 7.2-7.6 range. Maintaining 0.6-1.0 ppm (parts per million) chlorine residual and a 7.2-7.6 pH range will result in clean, sparkling water.

STABILIZED POOLS: For pools stabilized with cyanuric acid at concentrations up to 50 ppm, always maintained the chlorine residual at 1.0 to 1.5 ppm as determined by a test kit

DANGER! FATAL OR HARMFUL IF SWALLOWED. MAY PRODUCE SEVERE CHEMICAL BURNS. DO NOT ALLOW CONTACT WITH EYES, SKIN, MUCOUS MEMBRANES OR CLOTHING. STRONG OXIDIZER, CONTACT WITH OTHER MATERIAL MAY CAUSE FIRE. Keep from contact with clothing and other combustible materials. Do not store near combustible materials. Remove and wash contaminated clothing promptly. While Olin Tablets by itself is not a combustible material, it must not be mixed or contaminated with any foreign material such as household products, paint products, oil products, solvents, acids, pool chemicals, garbage, vinegar, beverages, or food products. Contamination or mixing with these types of chemicals and products may result in fire and the fire can be of great intensity. Prevent any burning material, such as a lighted cigarette, from falling into product. Drench fires with water. Extinguished product with water. Dispose of spilled product by flushing with large amount of water. Keep in a cool, dry place in original container. Always replace cap tightly on empty container. Wash empty container thoroughly with water and discard in safe place.

ANTIDOTE: External flush with water for 15 minutes. If irritation to skin persists, seek medical attention. For eye or mucous membrane irritation, flush immediately. Internal flush: milk, water, or other liquid. Do not induce vomiting. If ingestion of more than one tablet, call physician immediately.

This product is toxic to fish. Treated effluent should not be discharged where it will drain into lakes, streams, or ponds.

DIRECTIONS FOR WADING OR SWIMMING POOL USE: Easy to use, just throw in a tablet. One Wading and Swimming Pool Chlorine Tablet will last up to 4 hours and provide continuous chlorine to keep your pool water clean. Olin Tablets are the most effective chlorine source for wading and swimming pools.

INITIAL CHLORINATION: For new pools, add 4 tablets per 500 gallons of water. For existing pools, add 4 tablets per 500 gallons of water to disinfect and then test the water for proper pH and chlorine. If the pH is not 7.2-7.6, repeat the pH adjustment before chlorinating.

ROUTINE CHLORINATION DOSAGE: Add one to three tablets per 500 gallons daily, or as often as needed, to maintain 0.5-1.0 ppm chlorine residual when the pool is in use or not. Use a test kit frequently to determine chlorine residual. To apply, approximately 1.0 ppm or as a tablet of time, add one tablet per 500 gallons of water. For best results, use a dissolving basket or floating container, or add the Tablets to a plastic leaf strainer in the surface skimmer. Do not permit Tablets to contact steel or plastic pool linings. Do not throw Tablets directly into pool.

MAINTANCE OF pH: pH should be maintained in the 7.2-7.6 range. Maintaining 0.5-1.0 ppm (parts per million) chlorine residual and a 7.2-7.6 pH range will result in clean, sparkling water.

STABILIZED POOLS: For pools stabilized with cyanuric acid at concentrations up to 50 ppm, always maintain the chlorine residual at 1.0 to 1.5 ppm as determined by a test kit.
