

DIRECTIONS FOR SWIMMING POOL USE: Easy-to-use, dust free, dependable Olin HTH Dry Chlorine Tablets for Swimming Pools, containing 65% available chlorine, are designed to dissolve slowly (up to 4 hours) and provide a steady source of available chlorine over a period of time. Tablets control growth of algae and effectively kill many bacteria which may be the cause of infections. Seven tablets (approx.) equal 1 ounce.

INITIAL CHLORINATION: For initial chlorination of any pool water, add 1oz. of tablets for each 1,000 gallons. Allow 4 hours for the tablets to dissolve and then test the chlorine residual with a pool test kit and if below 0.6-1.0 ppm repeat this dosage until 0.6-1.0 ppm is obtained. If above 2.0 ppm allow the pool to stand until the residual drops to 2.0 ppm.

ROUTINE CHLORINATION DOSAGE: Subsequently add 3-4oz. of tablets per 5,000 gallons daily or as often as needed to maintain 0.6-1.0 ppm, whether the pool is in use or not. Use a test kit frequently to determine chlorine residual. If any chlorine residual is present, it is possible to increase the residual in pool water by 1.0 ppm by using 1oz. of tablets per 5,000 gallons of water. For best results, use a dissolving basket, a floating container, or add the tablets to a plastic leaf strainer in the surface skimmer. Do not permit tablets to contact steel or plastic pool linings. Do not throw Tablets directly into pool.

MAINTENANCE OF pH: pH should be maintained in the 7.2-7.6 range. Maintaining 0.6-1.0 ppm (parts per million) chlorine residual and a 7.2-7.6 pH range will result in clean, sparkling water.

STABILIZED POOLS: For pools stabilized with cyanuric acid at concentrations up to 50 ppm, always maintain the chlorine residual at 1.0-1.5 ppm as determined by test kit. Add 1oz. of Tablets per 10,000 gallons every other day or as often as needed to maintain 1.0-1.5 ppm chlorine residual. To control algae during the pool season, super-chlorinate every two weeks at the rate of 1oz. of HTH Tablets per 1,000 gallons of water when the average afternoon temperature is below 80°F. and once every week when the temperature is above 80°F. Before entering the pool, check the chlorine residual and if above 2.0 ppm, allow the pool to stand until the residual drops to 2.0 ppm.

SHOCK TREATMENT OR SUPERCHLORINATION: If algae develop shock treat or superchlorinate the pool water by adding 1oz. of Tablets for each 500 gallons of water. Allow 4 hours for the Tablets to dissolve and repeat if necessary. Before entering the pool, check the chlorine residual and, if above 2.0 ppm allow the pool to stand until the residual drops to 2.0 ppm.

Olin HTH Dry Chlorine is toxic to fish. Keep out of lakes, streams, or ponds. Do not contaminate water by cleaning of equipment, or disposal of wastes. Apply this product only as specified on this label.

DANGER! FATAL OR HARMFUL IF SWALLOWED. MAY PRODUCE SEVERE CHEMICAL BURNS! DO NOT ALLOW CONTACT WITH EYES, SKIN, MUCOUS MEMBRANES OR CLOTHING. STRONG OXIDIZER, CONTACT WITH OTHER MATERIAL MAY CAUSE FIRE OR EXPLOSION. Keep from contact with clothing and other combustible material. Remove and wash contaminated clothing promptly. While Tablets by themselves are not a combustible material, they must not be mixed or contaminated with any foreign material such as household products, soap products, paint products, solvents, acids, pool chemicals, vinegar, garbage, beverages, oil, pine oil, dirty rags, etc. Contamination or mixing with these types of chemicals and products may result in fire and the fire can be of great intensity. Prevent any burning material such as a lighted cigarette from falling into product. Drench fires with water. Flush spilled product with water. Dispose of spilled product by flushing with large amounts of water. Keep in cool, dry place in original container. Always replace cap. Wash empty container thoroughly with water and discard. Do not reuse empty container.

FIRST AID: External-flood skin or eyes with plenty of water for 15 minutes. If irritation to skin persists, get medical attention. For eyes-call a physician immediately. Internal-drink large quantities of water or milk. Follow with milk of magnesia, vegetable oil, or beaten eggs. Call physician immediately.
