GRANULAR POOL CHLORINE

ACTIVE INGREDIENT
SODIUM DICHORO-S-TRIAZINETRIONE DIHYDRATE *100%
*AVAILABLE CHLORINE 56%

DANGER: KEEP OUT OF REACH OF CHILDREN

SEE FIRST AID NOTE AND PRECAUTIONS ON BACK PANEL

NET WT. 100 LBS.

EPA REG. NO. 1258 984
EPA EST 1258-TN-1

Olin GRANULAR DRY CHLORINE

- Contains only chlorine that dissolves immediately.
- A most effective germicide and algaecide.
- Will not cause cloudiness in water.
- Will not cause scale forming in the water.
- Will maintain your pool crystal clear.

The control of pH is greatly simplified using Olin Granular Pool Chlorine. In fact, you will require from 1/2 to 1/4 the amount of acid usually applied. Olin Granular Pool Chlorine provides a more stable form of chlorine for easier maintenance of an effective chlorine residual in pool water for disinfecting action. It requires less storage space and maintains constant strength regardless of storage time. It is economical to use in that, after the pool is stabilized, you will need to apply Olin Granular Pool Chlorine less often.

INSTRUCTIONS

When starting on a new pool, superchlorinate to satisfy chlorine demand and to establish a chlorine residual of 1.0 ppm to 1.5 ppm available chlorine. To accomplish this, add 2 oz. Olin Granular Pool Chlorine per 1,000 gallons of pool water. The next morning, add cyanuric acid at the rate of 4 oz. per 1,000 gallons to stabilize the pool.

Olin Granular Pool Chlorine should be added daily or as needed at the rate of 1/8 to 1/4 oz. per 1,000 gallons of pool water to maintain a chlorine residual at all times of 1.0 ppm to 2.0 ppm as determined by a suitable test kit. The pH should be maintained between 7.2 and 7.6.

A shock treatment should be made every week during hot weather or after heavy rains. Less frequent shock treatments may be made during cool weather. For the shock treatment, add 2 oz. of Olin Granular Pool Chlorine per 1,000 gallons of pool water. Swimmers should not be permitted in the pool after the shock treatment until the chlorine residual has reached the 1.0 ppm to 2.0 ppm range.

Keep in mind that a slight flexibility must be maintained in the event of heavy accumulations of dust and dirt caused by storms or super heavy bathing loads which require additional dosages as needed to maintain the chlorine residual between 1.0 ppm and 2.0 ppm.

DANGER:

KEEP OUT OF REACH OF CHILDREN.

Corrosive causes eye damage. Do not get in eyes or on skin. Do not breathe dust. May cause skin, nose and throat irritation. May be fatal if swallowed. May cause burns to the skin.

FIRST AID:

In case of personal contact remove excess material and flush skin or eyes with cold water for at least 15 minutes. For eye get medical attention. Clean contaminated clothing before reuse.

If swallowed, feed gruel or cooked cereal followed by olive oil or cooking oil. Call a Physician immediately.

Strong oxidizing agent. Moisture contamination may liberate an irritant and hazard as chlorine containing gases. Do not use at 350.4°F with liberation of harmful gases. In case of fire or explosion if possible separate container to open area and protect it with large volume of water if necessary.

Mix only with water. Do not mix with other pool chemicals. Use only dry clean measures. Store in a cool dry place. Keep closed when not being used.

Do not use contents of empty container for food, feed, or other uses.

This product is toxic to fish. Treated pool effluent water should not be discharged where it will drain into lakes, streams, ponds or public water. Do not contaminate water by cleaning, use, or disposal of wastes.

Apply this product only as specified on this label.
