Repeat this procedure two more times.

DIRECTIONS FOR USE: It is a violation of federal law to use this product in a manner inconsistent with its labeling.

This product is an effective preservative in most aqueous compositions. Typical applications, and the suggested range of concentrations on which trials can be based are:

Latices: Natural and synthetic latices (and the processing water used to make these products) based on acrylate, butadiene, PVA, styrene and other monomers, for use in various applications, e.g., wax, paint, floor polishes, synthetic rubber latices., Emulsion paints and Stains (and the processing water used to make these products), Aqueous mineral slurries, Pigment slurries and Water based inks, add 0.05 - 3.5 gallons (0.05 - 0.35%) of this product per 1000 gallons of preserved product (based on total weight of product).

To preserve Adhesives, Paper coating compositions such as starch, latex and extender slurries such as kaolin, calcium carbonate and titanium dioxide preparations, and the processing water used to make these products, add 0.5 - 1.5 gallons of this product per 1000 gallons of preserved product (0.05- 0.35%).

[File ID: 001258-01290.2010222.ProxelBNLabel_ContainerLabel.PDF]

To preserve Pesticide Formulations add 0.5 - 5.8 gallons of this product per 1000 gallons of preserved product (0.05 - 0.58%). This product is exempt from tolerance under 40CFR180.910 and 40CFR180.920, materials exempted from the requirements of a tolerance when used in accordance with good agricultural practice as inert (or occasionally active) ingredients in pesticide formulations applied to growing crops only. Based on the current 40CFR180.910 and 40CFR180.920 limits of 0.04% bronopol and 0.1% BIT in formulations, use levels of up to 0.58% (5800 ppm) of this product are allowed.

For In-can preservation of household, consumer, industrial, institutional and janitorial products, add 0.5 - 3.5 gallons of this product per 1000 gallons of formulation. Example end use applications of these products include air fresheners, laundry products, soaps and detergents, fabric softeners, pre-spotters, spray starch, non-food contact all purpose cleaners, floor cleaners, carpet and fabric care products and automotive care products.

This product may be used to preserve liquid and solid formulations of these products or it may be used to preserve formulations offered as semi-solid gels, polishes, or waxes, or as pre-moistened wipes, mops or sponges. For in-can preservation of aqueous raw materials, silicone emulsions and surfactants used in the household, consumer, industrial, institutional and janitorial products listed above, add 0.05 - 3.5 gallons of this product per 1000 gallons of product to be preserved (0.05 - 0.35%).

General Recommendations: The concentration required to give protection depends on several factors. These include susceptibility of the system to microbiological degradation, the extent to which microorganism can gain access, the species involved, pH, temperature, and length of time for which protection is required. For protection against bacterial attack, a concentration within the range of 0.5 - 5.0 gallons of this product per 1000 gallons of product to be preserved (0.05 - 0.35%) is almost invariably sufficient.
