DEWITT D-3

SUPER INSECTICIDE

Kills Roaches, Flies, Mosquitoes, Gnats — Residually Repels Roaches, Flies & Ants

A spray for flies, mosquitoes, roaches, clothes moths, bedbugs, carpet beetles, silverfish, accessible stages of grain weevils, ants, waterbugs, centipedes, spiders, fleas, ticks, and many other household insects, when used as directed.

ACTIVE INGREDIENTS: 100.00%

Petroleum Distillate	96.81%
Oleic Acid	1.50%
*Di-N-Butyl Succinate	1.00%
**N-octyl bicycloheptene dicarboximide	0.36%
***Technical Piperonyl Butoxide	0.22%
Pyrethrins	0.11%

- *Tabatrex
- **M-G-K 264
- ***Equivalent to 0.176% (butyl carbityl) (6-propylpiperonyl) ether and 0.044% related compounds.

DEWITT D-3 SUPER INSECTICIDE is a concentrated product designed especially for use in cafes, restaurants, food storage warehouses, flour mills, meat packing plants, and the like. Use as a space spray in food processing plants only when plant is not in operation. Foods should be removed or covered during treatment. All food processing surfaces should be covered or thoroughly cleaned before using. This product is effective in all types of fogging machines. General dosage for fogging machine use is one ounce of insecticide per 1,000 cubic feet of space to be sprayed for control of flying insects, and two ounces per 1,000 cubic feet for the control of crawling insects. DO NOT USE BEFORE READING SPECIFIC INSTRUCTIONS BELOW.

Directions for Use

For Killing and Residually Repelling Roaches and Ants: Apply as coarse spray to point of runoff around baseboards, cracks, crevices, water pipes, and other hiding places where infestation may occur. For effective residual control it is necessary to apply around the entire perimeter of each room treated. Repeat application when necessary.

For Waterbug, Silverfish, Centipedes, Spiders, Fleas, and Ticks: Spray directly the infested area, working spray into cracks and other hiding places. Insects should be hit directly as far as possible. Ants may be controlled by spray treating ant trails and area around door sills and

window frames where ants enter the premises. Repeat application when necessary.

Carpet beetles may be controlled by spray treatment of floor coverings and all cracks in floors and along baseboards. **Bedbugs** in household may be controlled by thorough and repeated spraying of bed and mattress. Spray should always be directed into folds of mattress, around baseboards, walls, and floors.

For Control of Flies and Mosquitoes: Close doors and windows and spray all parts of room at the rate of one ounce insecticide per 1,000 cubic feet of space. Leave room closed from 10 to 15 minutes; then sweep up and destroy the fallen insects. Repeat as necessary.

For Residual Repellency Against Flies: Apply as a coarse spray on walls, ceiling, window and door frames, and screens—wherever flies light or congregate. Spray until surfaces are well moistened, avoiding contact with food or food utensils. Continued treatment creates a build-up of repellency and will increase repellency. Repeat application when needed.

Clothes moths may be controlled by thorough spraying of all articles to be protected, paying particular attention to seams and folds. Be certain that coverage is thorough. The interior surface of storage containers, closets, and trunks should also be thoroughly sprayed so as to kill all moth larvae that may be feeding on lint in the cracks. Unless articles treated are stored in moth-tight containers, treatment should be repeated monthly.

Accessible stages of grain weevils, cadelles, grain moths, flour beetles, and grain mites may be controlled by wetting surfaces thoroughly and treating all infested surface areas, insect hiding places, and insect runways to the point of runoff. Repeat when necessary.

CAUTION

KEEP AWAY FROM CHILDREN

Do not use near open flame. Harmful if swallowed. Do not spray directly into exposed food. Cover or remove fish bowls and aquaria before and for approximately one hour after treatment. Keep away from domestic animals.
