THERMO-FOG INSECTICIDE

U.S.D.A. Reg. No. 1270-73

Specially Formulated for Thermal Fogging Devices

Kills Roaches, Flies, Mosquitoes, and Gnats

A spray for flies, mosquitoes, roaches, clothes moths, bedbugs, carpet beetles, silverfish, accessible stages of grain weevils, ants, waterbugs, centipedes, spiders, and many other household insects.

ACTIVE INGREDIENTS:	100.00%
Petroleum Distillate	98.22%
N-octyl Bicycloheptene dicarboximide*	.94%
Technical Piperonyl Butoxide**	.56%
Pyrethrins	.28%

*M-G-K 264

**Equivalent to 0.44% (Butylcarbityl) (6-propylpiperonyl) ether and 0.12% related compounds.

ZEP THERMO-FOG INSECTICIDE is a highly concentrated product designed especially for use in cafes, restaurants, food storage warehouses, flour mills, meat packing plants and the like. When used in meat packing plants, all exposed meats should be removed before treatment of infested area. Clean the premises by thorough washing after completion of the application.

ZEP THERMO-FOG INSECTICIDE is highly effective in all types of fogging machines. General dosage for fogging machine use is one-half ounce ZEP THERMO-FOG INSECTICIDE per 1,000 cubic feet for the control of flying insects and one ounce per 1,000 cubic feet for the control of exposed crawling insects.

DO NOT USE BEFORE READING SPECIFIC INSTRUCTIONS BELOW. KEEP AWAY FROM CHILDREN. See below for further precautionary statements.

Directions for Use

For control of flies and mosquitoes: Close doors and windows and spray all parts of room at the rate of one-half ounce ZEP THERMO-FOG INSECTICIDE per 1,000 cubic feet of space. Leave room closed from 10 to 15 minutes; then sweep up and destroy the fallen insects. Repeat as necessary.

For killing roaches and ants: Apply as coarse spray to point of run-off around baseboards, cracks, crevices, water pipe entrances, and other hiding places where infestation may occur. Repeat application when necessary.

Accessible stages of grain weevils, cadellas, grain moths, flour beetles and grain mites may be controlled by wetting surfaces thoroughly and treating all infested surface areas, insect hiding places, and insect runways to the point of run-off. Repeat when necessary.

For waterbugs, silverfish, centipedes and spiders: Spray directly the infested area, working spray into cracks and other hiding places. Insects should be hit directly as far as possible.

Carpet beetles may be controlled by spray treatment of floor coverings and all cracks in floors and along baseboards. Bedbugs in household may be controlled by thorough and repeated spraying of bed and mattress. Spray should always be directed into folds of mattress, around baseboards, walls, and floors.

Clothes moths may be controlled by thorough spraying of all articles to be protected, paying particular attention to seams and folds. Be certain that coverage is thorough. The interior surface of storage containers, closets, and trunks should also be thoroughly sprayed so as to kill all moth larvae that may be feeding on lint in the cracks. Unless articles treated are stored in moth-tight containers, treatment should be repeated monthly.

CAUTION

— KEEP OUT OF REACH OF CHILDREN —

Harmful if swallowed. Do not use or store near open flame or heat. Keep away from domestic animals.

Do not spray directly into exposed food. Use the product as a space spray in food processing plants only when plant is not in operation. Foods should be removed or covered during treatment. All food processing surfaces should be covered or thoroughly cleaned before using.
