

[1270 - 135]

**ACTIVE INGREDIENTS:**

Pyrethrins .....	1.00%
Technical Piperonyl Butoxide* .....	2.00%
N-octyl bicycloheptene dicharboximide .....	3.34%
Butoxypolypropylene Glycol .....	5.00%
Petroleum Distillate .....	8.66%

**INERT INGREDIENTS:** ..... 80.00%

\*Equivalent to 1.6% (butylcarbityl) (6-propylpiperonyl) ether and .4% of related compounds.

ZEPSPRAY-MATIC INSECTICIDE is a highly effective concentrated insecticide containing Pyrenones and Piperonyl Butoxide. ZEPSPRAY-MATIC INSECTICIDE AUTOMATIC AEROSOL DISPENSER is designed for use in markets, stores, restaurants, hotels, wineries, canneries, breweries, food processing plants, hospitals where flies, gnats and mosquitoes are an annoyance.

Do not use in the edible product areas of food processing plants, restaurants or other areas where food is commercially prepared or processed. Do not use in serving areas while food is exposed.

FOR ECONOMIC POISON REGISTRY

**DIRECTIONS**

ZEPSPRAY-MATIC INSECTICIDE is especially designed for use in the ZEPSPRAY-MATIC AEROSOL DISPENSER. One unit for each 6,000 cubic feet of space to be treated is recommended. Install the activator on a wall approximately 7 feet from the floor. Do not install directly over any food handling or dispensing area. A specific amount of concentrated insecticide is automatically released every fifteen minutes through the periodic activation of the ZEPSPRAY-MATIC AEROSOL DISPENSER 0.01 mg. metered chamber. After two hours operation, enough insecticide is suspended in the air to kill a proportion of flies, gnats, or mosquitoes present, thereby greatly reducing their numbers. The effectiveness of ZEPSPRAY-MATIC INSECTICIDE will be noticed within one hour after the ZEPSPRAY-MATIC AEROSOL DISPENSER has been activated. If less than two hours of insect control is required, the ZEPSPRAY-MATIC AEROSOL DISPENSER should be set to start one hour before control is required and allowed to continue to run one hour after control is no longer necessary.

The rate of air change, shape, or space to be treated, temperature, humidity and other conditions affect insect activity. Although one ZEPSPRAY-MATIC AEROSOL DISPENSER per each 6,000 cubic feet of space may be considered average, adjustments should be made if necessary, depending upon the conditions under which the units are to be used.

The 12 ounce can of ZEPSPRAY-MATIC contains approximately 3300 "shots" and will operate at 15 minute intervals for a total of 825 hours or 34 days on a continuous 24 hour basis, or 68 days on a 12 hour basis. If operating on a 24 hour basis, container should be replaced once every month; if on a 12 hour basis, container should be replaced every two months. To replace insecticide container, lift lid and snap insecticide container onto mounting cup and close lid and your ZEPSPRAY-MATIC AEROSOL DISPENSER unit is ready to operate.

**WARNING!**

Contents under pressure. Do not puncture. Do not use or store near heat or open flame. Exposure to temperatures above 130°F. may cause bursting. Never throw container into fire or incinerator.
