NET WEIGHT 5 POUNDS

DIRECTIONS

McNess Rat and Mouse Killer is a scientifically prepared Ready-to-Use Bait. Do not add anything to it.

Place McNess Ready-to-Use Rat and Mouse Killer in locations where rats and mice feed, water or travel. Bait placements along walls, in corners and in concealed locations where rats and mice can feed unobserved are desirable. Examine bait stations regularly and replenish bait before completely eaten. Replace contaminated or spoiled baits promptly.

RATS: Use at least 1 plastic bag containing 4 ounces of McNess Ready-to-Use Rat and Mouse Killer per station. Make several punctures in bag before use to increase release of scent. Bag may be tossed into hard to reach locations. It is not necessary to remove bait from bag. Maintain an uninterrupted supply of bait for at least 10 days.

MICE: Place 1 to 2 tablespoon amounts of McNess Ready-to-Use Rat and Mouse Killer at 8 - 12 foot intervals. Mice are more difficult to control than rats and complete control may require more bait stations and a longer period of baiting. Maintain an uninterrupted supply of bait for at least 15 days.

IMPORTANT: Continue baiting until all signs of feeding have stopped. Where a continuous source of infestation is present from nearby dumps or other sources, use permanent bait stations and replenish bait as needed.

CAUTION: Baits should be placed in locations not accessible to children, pets, wildlife and domestic animals, or in tamper-proof bait boxes. Do not contaminate water by cleaning of equipment, or disposal of wastes. Apply this product only as specified on this label. In case bait is eaten, give a tablespoonful of salt in a glass of warm water and repeat until vomit fluid is clear. Call a physician immediately. Do not reuse container. Destroy when empty.

NOTE TO PHYSICIAN: In case of ingestion of McNess Ready-to-Use Rat and Mouse Killer, blood transfusions combined with intravenous injections and oral doses of Vitamin K are indicated as in the case of hemorrhage caused by overdoses of Dicumarol.
