USDA Registration No. 1304-48

When used as directed Mc-Ness Cattle Spray protects animals from horn flies, stable flies, face flies and house flies all day in the pasture as well as in the barn at milking time. This reduces the discomfort and annoyance caused by flies which often decreases milk production and weight gain.

DIRECTIONS

For dairy and beef cattle: Spray animals daily using 1 to 2 ounces per adult animal. Use proportionately less for calves. Cover all parts of the animal with spray with particular attention to back, flanks and legs. Do not soak the skin or wet the hide. Do not apply more than 2 ounces per animal per day. Since continuous daily treatments create a build-up of Ciodrin on the animal, spraying may be reduced to once every other day after the first 3 or 4 days.
