DIRECTIONS FOR USE

Alpha Algaecide No. 71-43 is used to control algae, bacteria, and fungi in recirculating commercial and industrial water cooling towers. Prior to its use, systems must be cleaned to remove algal growth, microbiological slime and other deposits. An initial slug addition of 6 to 15 fluid ounces of Alpha Algaecide No. 71-43 per 1000 gallons of water, to provide a concentration of 48 to 120 parts per million of Alpha Algaecide No. 71-43 based on the total weight of water in the system is recommended. Subsequent slug additions of 1.5 to 15 fluid ounces of Alpha Algaecide No. 71-43 per 1000 gallons of water (12 to 120 parts per million of Alpha Algaecide No. 71-43) should be employed every 2 to 5 days or as needed. The frequency of addition depends upon the relative amount of bleedoff and the severity of the microbiological problem. Slug additions should be made in the sump of water cooling towers.
