DIRECTIONS

Shake contents before using. Unscrew top cover of container as directed when ready to use.

Place cans in single row on the ground in a central walk. Space them evenly for proper distribution of smoke.

Close all ventilators, doors and other openings. Starting with can at farthest end of greenhouse away from exit, light SPARKLER AT HANDLE END and insert into top inch of contents. Proceed to next can, etc., until last can is ignited, then leave greenhouse which should remain closed for at least four hours. Cut wide open blooms of roses, carnations and snapdragons before treating.

Ventilate gradually, preferably within eight hours — particularly when crops are in bloom or when growth is unusually soft.

Cloudy day, late afternoon or night treatments are recommended, at temperatures which can be kept between 70° and 80°F. for the first two hours. Avoid treating when windy or in the presence of excessive moisture.

Repeat treatment one week thereafter and at ten day intervals when necessary if reinfestation occurs.

Do not remain in greenhouse during treatment WITHOUT WEARING FULL-FACE MASK of a type approved for use against Tetradifon by the U. S. Dept. of Agriculture and protective clothing to minimize the danger of absorption of the vaporized material through the skin.

DO NOT USE ON EDIBLE FOOD CROPS.
