

DIRECTIONS FOR USE

SUBTERRANEAN TERMITES—Directions for Non-Professional Use.

Use Chlordane in a 1.0% water emulsion. To prepare a 1.0% Chlordane water emulsion add 1 gallon of this Chlordane product to 48 gallons of water.

Buildings Having Basements or Crawl Spaces

Dig a trench along the outside of the foundation walls. In brick or hollow block or concrete foundations, dig a trench too, but not below, the footing. Then as the trench is refilled, treat the soil at the rate of 4 gallons per 10 linear feet for each foot of depth. A trench 3 feet deep would require 12 gallons per 10 linear feet.

The objective is to establish a treated soil barrier which will prevent termite entry. Other critical areas may also require treatment. It is suggested that you consult the State Extension Service for advice.
