start flooding. Extreme Flo-Higher is in winter. This early
in the spring before flood begins to appear and continue
flooding throughout the summer until the fall. until old
weather restricts the activity. Extreme Flo-Higher is in
winter. This may be put up to drought and to a rising
water level

[illegible]

in order to achieve optimum fly control in Vietnam fly Mo-Par
2-2 Virus. We should be used in addition with other
good eating habits and sanitation practices

Reason is the regulator: estimates of unshared variance are
 3. 44 to 1.00 34.

Figure 1. The effect of the number of trials on the number of correct responses. The number of correct responses was plotted against the number of trials for each condition. The number of correct responses increased with the number of trials for all conditions. The number of correct responses was highest for the condition with the highest number of trials (10 trials) and lowest for the condition with the lowest number of trials (2 trials).
