The Chemical Dust Control

An outstanding dust mop treatment and dust control for daily sweeping of all types of floors. Contains an effective bacteriostat that helps prevent spread of germs in sweeping, specifically Staph. aureus, and inhibits germ growth in mop. Removes both heavy dirt and fine dust, keeps dust from rising during sweeping, deposits nonslip film to hold dust brought in between sweepings. Highly diffusive, thus economical: a few ounces treats a large mop. Has prolonged dust-absorbing power. UL classified as to fire hazard and listed as slip resistant.

ACTIVE INGREDIENTS: Di-alkyl (50% C₁₂, 20% C₁₄, 15% C₁₀, 10% C₁₆, 5% C₁₈) Dimethyl ammonium chloride, 0.375%.

INERT INGREDIENTS: 99.625%, including effective dust control agents.

DIRECTIONS

Treating Mops

1. When mop is new or freshly washed, pour correct amount of Misto as in table below over yarn area on floor side of mop.
2. Roll up mop and place in clean covered container for 4 or 5 days to cure. If treating more than 4 mops, place in container without roll up.
3. After mop is in use, to treat for next day's sweeping, pour or spray ONE-HALF the amount in table on floor side of mop and let hang at least 8 hours before using again.

For all finished and/ or sealed floors, and bare Stone, except Concrete:

MISTO MOP
