General Information:

FOR USE ON STORED GRAINS: Wheat, corn, oats, rye, barley. Protects against damage from Confused Flour Beetle, Rice Weevil, Saw-toothed Grain Beetle, Flat Grain Beetle, Red Flour Beetle, Rusty Grain Beetle, Lesser Grain Borer, and Indian Meal Moth.

IMPORTANT: USE OF THIS PRODUCT, AS DIRECTED, WILL BE WITHIN THE TOLERANCE OF 8 PARTS PER MILLION FOR MALATHION. TREATED GRAIN IS NOT SUBJECT TO DOWNGRADING AND CAN BE MILLED INTO FLOUR OR FEED USING NORMAL PRODUCTION METHODS.

STORED GRAIN: Apply this product to the grain at the rate of ten lbs. per 1,000 bushels as the grain is being loaded or turned into final storage. To protect stored grain from attack by Indian Meal Moth, apply this product on the surface of grain at the rate of 5 lbs. per 1,000 square feet of surface area. Apply the dust evenly over the surface immediately after the grain is loaded into storage. Repeat if necessary.

Methods of Application: One convenient way to apply this product to shelled corn, wheat, corn, oats, rye, and barley is to treat it when it is in the field wagon or truck prior to binning. Determine the amount in the wagon or truck by multiplying the length by width by depth (all in feet) and multiply this total by 0.8 to get the number of bushels. Measure out the correct amount of this product and spread evenly over the surface of the grain in the wagon or truck bed. Cut the dust into the grain with a shovel. The dust will become mixed with the grain as it is hauled from the field to the storage bin, and as it is dumped from the bed into the auger hopper. Further mixing will occur when the grain is augered or blown into the storage bin. Mixing is completed as the treated grain rolls down the cone shaped pile in the bin. Another method of applying this product to grain is to evenly meter the correct amount of dust onto the grain as it is being transferred into storage, using a suitable metering device. Mixing is completed as the grain is transferred into storage and rolls down the cone shaped pile in the bin.
