

UNICO

UNICO 5% Toxaphene Back Rubber Solution

DIRECTIONS FOR USE

BEEF CATTLE

To protect beef cattle against horn flies, use this solution undiluted to saturate fabric covering of back rubber device or to fill storage tank of machine applicator. The device or applicator should be installed so the cattle can readily rub against it to distribute the oil solution over portions of their hide. It is preferable to install back rubber device or applicator in gateways, entrances, or lanes leading from pasture to water or salt, so the cattle will be forced to rub against it in going from one area to another.

May be used also to aid in controlling lice on beef cattle.

Observe back rubber device frequently and re-treat fabric or refill reservoir as necessary to maintain readily accessible treatment for the beef cattle.

DO NOT APPLY TO DAIRY ANIMALS. DO NOT APPLY TO MEAT ANIMALS WITHIN 4 WEEKS OF SLAUGHTER. DO NOT MAKE TREATED BACK RUBBER DEVICES ACCESSIBLE TO DAIRY ANIMALS. DO NOT TREAT ANIMALS LESS THAN 3 MONTHS OLD OR EMACIATED ANIMALS.

SWINE

For control of lice, apply undiluted by standard rubbing devices. Do not permit animals access to this treatment within 28 days of slaughter.

Do not treat pigs under 3 months old or emaciated animals.

5% TOXAPHENE BACK RUBBER SOLUTION

INGREDIENTS

ACTIVE INGREDIENTS		100%
Toxaphene*	5%	
Petroleum distillate	95%	

*Technical chlorinated camphene containing 67% to 69% chlorine
