

UNICO ATRALIN WEED KILLER

HOW TO USE UNICO

UNICO ATRALIN is a selective herbicide for the control of broadleaf weeds in corn, sorghum, and soybeans. It is applied as a pre-emergence or early post-emergence spray. The active ingredient is atralin, which is absorbed by the roots and leaves of the weeds and moves to the growing points, where it kills the plants. UNICO ATRALIN is effective against many common weeds, including pigweed, lambsquarters, and velvetleaf. It is safe for the crop when used as directed. For best results, apply UNICO ATRALIN to the soil or to the weeds before they have emerged from the ground. The amount to apply depends on the soil type and the type of weeds to be controlled. See the table below for application rates.

Apply UNICO ATRALIN to the soil or to the weeds

Soil Type	Amount to apply, 25 in. of soil or to weeds sprayed	Amount to apply, Band Treatment
Light Colored Low organic matter	10 gal. water per acre	14 Bands
2 1/2 to 5% organic matter	10 gal. water per acre	12 Rows Example
5 to 10% organic matter	10 gal. water per acre	10 Bands
10 to 20% organic matter	10 gal. water per acre	8 Bands
Dark colored	10 gal. water per acre	6 Bands
Moderate organic matter	10 gal. water per acre	4 Bands
High organic matter	10 gal. water per acre	2 Bands

For best results, apply UNICO ATRALIN to the soil or to the weeds before they have emerged from the ground. The amount to apply depends on the soil type and the type of weeds to be controlled. See the table below for application rates. UNICO ATRALIN is safe for the crop when used as directed. For best results, apply UNICO ATRALIN to the soil or to the weeds before they have emerged from the ground.

EQUIPMENT

UNICO ATRALIN can be applied with a backpack sprayer, a tractor-mounted sprayer, or a band applicator. The sprayer should be calibrated to deliver the amount of UNICO ATRALIN specified in the table above. The sprayer should be operated at a constant speed and the nozzle should be held at a distance of 18 to 24 inches above the ground. The nozzle should be directed so that the spray is applied to the soil or to the weeds. UNICO ATRALIN is a selective herbicide and should not be applied to the crop. For best results, apply UNICO ATRALIN to the soil or to the weeds before they have emerged from the ground.
