MILL SPRAY kills Flour Beetles, Rice Weevils, Indian Meal Moths, Saw Tooth Grain Beetles and many other similar insects when used according to directions. MILL SPRAY is an aid in the control of pests in grain and other stored products.

Weevils, Moths, Beetles and many other similar insects breed in nooks, corners, crevices, and other secluded places where conditions are ideal for propagation. Spray MILL SPRAY in all such places as well as aisles, walls, windows, and around and about machinery. Fill rooms with fine mist spraying liberally towards the ceiling, working downward toward the floor. Spray MILL SPRAY in the late afternoon so that all doors, windows, and other openings may be left closed for the longest practical period, and thus subject the insects to the deadly mists of MILL SPRAY for the longest time. Insects must be enveloped in the MILL SPRAY mist or contacted with its spray in order to kill them. Thus, best results will be obtained. Keep walls, rafters, machinery, etc., well swept, and also pound elevator legs so that refuse will fall into the boot; and then clean out the boot. Cleanliness will reduce infestation. Infestation may be reduced or abated by the regular application of MILL SPRAY.

CAUTION

KEEP OUT OF REACH OF CHILDREN

Avoid breathing spray mist. Avoid contact with skin. Do not spray near or toward an open flame.
