

USE AND DOSAGE:

The normal oil weight fish chemical application rate is 1.0 gallons of water per acre. For about 2-10 gallons of water and Chem Fish applied to six acre feet of water. Chem Fish Regular applied at a concentration of 0.5 parts of Chem Fish Regular per million parts of water by volume is required for satisfactory fish kill. Uniform dispersion of Chem Fish Regular throughout the area is essential in order to obtain maximum kill. Maximum kill has been obtained when surface water temperatures have been above 70°F. Satisfactory control of fish, however, can also be obtained at lower temperatures. Where bullheads are present up to 1.0 ppm may be used for best results. While the purpose of Chem Fish Regular is to reduce applications of "rough" or undesirable fish, beneficial species that may be present may likewise be sacrificed. In the opinion of authorities and reduced concentrations of rotenone, selective removal of some objectionable species appears to be possible. Check with local State Conservation officials.

CAUTION: Do not pour, spill or store near fire or flame.
