

CONTROL NO. \_\_\_\_\_

ROLL DRUM ON GROUND SEVERAL TIMES BEFORE USING.

**DIRECTIONS FOR USE:**

**For Control of Rough Fish:** Chem Fish Synergized O. F. is pre-mixed and applied at rate of 1 gallon to six acre feet of water. Chem Fish Synergized O. F. can be used as is in drip stations without further emulsification. Chem Fish Synergized O. F. applied at a concentration of 0.5 parts per million parts of water by weight is required for satisfactory fish kill. Uniform dispersion of Chem Fish Synergized O. F. throughout the area is essential in order to obtain maximum kill. Maximum kill has been obtained when surface water temperatures have been above 70 degrees. Satisfactory control of fish, however, can also be obtained at lower temperatures. Where bullheads are present or water is exceptionally alkaline concentration up to 1.0 ppm may be used for best results.

\* **CAUTION:** Do not pour, spill or store near fire or flame.

**NOTICE:** Do not expose to freezing temperatures. Store at temperatures above 35 degrees F.

**IMPORTANT:** The use of rotenone for rough fish work is restricted by law in certain states. Authorized clearance to use this product should be obtained from the State Department of Conservation.

While the purpose of CHEM FISH SYNERGIZED O.F. is to reduce populations of "rough" or undesirable fish, beneficial species when present may likewise be sacrificed. Under optimum conditions and reduced concentrations of rotenone, selective removal of some objectionable species appear to be possible. Check with State Conservation officials
