Buckman Laboratories, Inc. 1256 North McLean Boulevard Memphis, TN 38108

Attention: Grace L. Bonner

Gentlemen:

Subject: Basan 30

EPA Registration No. 1448-55

The labeling, for the application referred to above, submitted in connection with your application for amended registration under Section 3(c) (7) (B) of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (FIFRA), is acceptable since you have agreed that:

- 1. You will submit the data listed below, conducted in accordance with the proposed test guidelines referred to below, no later than six months after the date of registration.
 - a. Primary Eye Irritation Study, § 163.81-4.
- You will submit and/or cite all data required for registration/reregistration of your product under FIFRA Section 3 (c) (5) when the Agency requires all registrants of similar products to submit such data.
- 3. You will submit production information (pounds or gallons produced) for this product for the fiscal year in which the use(s) on secondary recovery waters, drilling muds, crude or refined oils, cooling water, cutting oil, cooling tower wood, oil paints and latex emulsions, particle board, paper and paperboard machines and skins and hides are conditionally registered, in accordance with Section 29 of FIFRA. The fiscal year begins October 1 and ends September 30.

The production information will be submitted to the Agency no later than November 15, following the end of the preceding fiscal year.

If the conditions of this amendment are not complied with, the registration will be subject to cancellation in accordance with Section 6 (e) of the Act.

A stamped copy of the label is enclosed for your records.

Sincerely,

Henry M. Jacoby Product Manager (21) Pungicide-Herbicide Branch Registration Division (TS-767)

Enclosure

INDUSTRIAL MICROBICIDE

· EPA REG. NO: 1448-55

KEEP OUT OF REACH OF CHILDREN WARNING

PRECAUTIONARY STATEMENTS HAZARDS TO HUMANS AND DOMESTIC ANIMALS

WARNING: Causes eye damage and skin irritation. May be harmful if absorbed through the skin. Harmful if swallowed. Do not get in eyes, on skin, or on clothing. Wear goggles or face shield and rubber gloves when handling. Wash thoroughly after handling.

FIRST AID: In case of eye contact, flush eyes immediately with plenty of water for at least 15 minutes and get medical attention. In case of skin contact, wash with soap and plenty of cool water. Wash contaminated clothing before reuse. If product is swallowed, call a physician immediately. If patient is conscious, induce vomiting by stroking or tickling the patient's throat or far back on patient's tongue. Emetics such as 2 teaspoonsful (10 ml) of ipecac syrup or 1 teaspoonful (5 ml) of dry mustard in warm water to form a paste or even soap in warm water can be used. Repeat until vomit fluid is clear. Then have patient drink plenty of milk, gelatin solution, beaten egg whites, flour and water, or other nonoily demulcent. Never induce vomiting or give anything by mouth to an unconscious person.

Note to physician: Probable mucosal damage may contraindicate gastric lavage.

ENVIRONMENTAL HAZARDS: This pesticide is toxic to fish. Do not use in offshore or estuarine drilling operations. Do not discharge into lakes, streams, ponds, or public waters unless in accordance with a NPDES Permit. For guidance, contact the regional office of the Environmental Protection Agency.

STORAGE & DISPOSAL

PROHIBITIONS: Do not contaminate water, food, or feed by storage or disposal. Open dumping is prohibited. Do not reuse empty container.

PESTICIDE DISPOSAL: Pesticide, spray mixture, or rineate that cannot be used or chemically reprocessed should be disposed of in a landfill approved for pesticides or buried in a safe place away from water supplies.

CONTAINER DISPOSAL: Triple rinse (or equivalent) and dispose in an incinerator or landfill approved for pasticide containers, or bury in a safe place.

GENERAL: Consult Federal, State, or local disposal authorities for approved alternative procedures such as limited open burning.

DIRECTIONS FOR USE

IT IS A VIOLATION OF FEDERAL LAW TO USE THIS PRODUCT IN A MANNER INCONSISTENT WITH ITS LABELING. Technical assistance in applying Busen 30 for microorganism control as described in the following is available upon request when a description of the problem is provided.

LEATHER: Busen 30 is used at treatment rates of 0.25 to 2 lb/1000 lb of white weight stock to prevent the bacterial or fungal degradation of selt-cured hides and skins and to prevent mold growth on chrome- or vegetable-tanned hides and skins. For treating hides cured with dry sait, Busen 30 should be sprinkled on the hides or should be mixed with the salt before it is applied to the hides. For treating tenned hides, Busen 30 should be dispersed in water and added to the pickling solution or to the tanning liquor at the start of the tanning operation.

PULP MILLS: To protect wood chips from fungal degradation during storage, Busan 30 is used at 0.5 to 2 lb/ton of oven-dry wood. It can be applied through a water shower or spray located in the pneumatic conveyor carrying chips from the chipper to the storage pile. For preservation of wet lap or sheet pulp, Busan 30 is used at 0.5 to 4 lb/ton of oven-dry fiber. It is applied to the surfaces of the dewatered pulp by means of sprays or applicator rolls.

PAPER MILLS: To control be terial and fungal growth on paper, and paperboard machines, Busan 30 is added to the white water or stock at 0.1 to 0.5 lb/tor of dry paper or paperboard produced. To make mold-resistant paper or paperboard, Busan 30 is used at 0.5 to 2 b/ton of dry paper or paperboard per side treated. For coated paper or board, Busan 30 is incorporated in the coating mix prior to application of the coating. For uncoated paper or board, Busan 30 is dispersed in water, surface-sizing solution, or other solvent and applied to the surface to be protected by means of an applicator roll. For the preservation of agricultural mulch paper, Busan 30 is used at 1.5 to 5 lb/ton air-dry paper, it is applied to the surfaces of the mulch paper by tub-sizing methods or by means of sprays or applicator rolls before the paper is coated.

PARTICLE BOARD: Busan 30 is employed as a preservative for particle board, insulation board, and other wood-base fiber and particle panel materials. In this use, Busan 30 is mixed with the resin or binding agent at 0.1 to 1% based on the dry weight of the wood.

SAP STAIN CONTROL: Busen 30 is used to control sep stain and mold on freshly cut softwood and hardwood lumber, logs, poles, posts, and timbers. It is applied by dipping, spraying, or pressure impregnation of the wood with a dispersion containing 2 to 6 lb (2 to 6 pt) of Busen 30 per 100 gal of water. Treatment should be made within 24 hr of cutting or sawing, particularly in warm weather, and treated wood should not be exposed to heavy rains soon after treatment.

COOLING TOWERS: Busan 30 is used to protect cooling tower wood against soft or surface rot and internal or dry rot, it is applied by spraying or painting a dispersion containing 0.5 to 0.7% Busan 30 in water onto the clean wood surfaces. The amount applied should provide 0.6 to 0.8 lb Busan 30 per 1000 ft² of wood surface. Soft or surface rot can also be inhibited by periodic shock doses of Busan 30 to the recirculating cooling water at the tower basin or cold well. The dosage should provide 1.25 lb of Busan 30 per 1000 gal of water and the bleedoff should be stopped for 4 to 6 hr after treatment. The shock treatment should be repeated every four months.

COOLING WATER: Busan 30 is used to control algae, bacteria, and fungl in industrial recirculating cooling water systems. Before treatment is begun, the system should be cleaned thoroughly to remove old algal growth, microbiological slime, and other deposits. The system should then be drained, flushed, refilled with water, and treated with an initial dose of 0.6 to 3.7 fl oz Busan 30 per 1000 gal water in the system. Subsequent additions of 0.2 to 1.2 fl oz per 1000 gal should be made every 1 to 5 days, depending on amount of bleedoff and severity of microbiological fouling. PAINT FILMS: Busan 30 is used to protect peint films against disfigurement and deterioration by fungl. For oil paints formulated with modified barium metaborate, zinc oxide, or combinations of these products, Busan 30 is added at 0.1 to 0.5% based on the total weight of the paint. In other oil paints, 0.3 to 1.0% Busan 30 is recommended. The Busan 30 can be dissolved in mineral spirits and added in the letdown or added directly to the finished paints. For water-thinned latex emulsion paints, Busan 30 is used at 0.1 to 1% based on the total weight of the paint. The microbicide can be premixed with wetting agent and added to the finished paint.

DRILLING FLUIDS: To inhibit bacterial and fungel degradation of the fluids or mude used in the drilling of wells, Busan 30 is incorporated in the drilling fluid at concentrations of 0.05 to 0.25% based on the total wet weight of the fluid. PETROLEUM SECONDARY RECOVERY: Busan 30 is used to control sulfate-reducing bacteria, allme-forming bacteria and fungi in oil-field water, polymer, or miceller floods, water-disposal systems, and other oil-field water systems at dosage rates of 0.2 to 3.7 fl oz of Busan 30 per 1000 gal of water treated. Additions should be made continuously or intermittently by means of a metering pump at the free water knockouts, before or after injection pumps and injection well headers. Continuously until deeired degree of control is achieved. Then treat with 0.2 to 1.2 fl oz Busan 30 per 1000 gal of water continuously, or as needed to maintain control. Intermittent or Slug Method: When system is noticeably fouled, or to maintain control, add 0.6 to 3.7 fl oz Busan 30 per 1000 gal of water continuously.

CRUDE AND REFINED Oil.S: Busan 30 is an oil-soluble preservative for the control of bacteria and fungi that cause the degradation of crude oil and refined fuel oils during storage, it should be added to the oil as it is being transferred from the shipping container to the storage tank at the rate of 0.6 to 6.0 fl oz Busan 30 per 1000 gal of oil. Addition should be made batchwise where mixing occurs or continuously to the suction side of the transfer pump.

CUTTING FLUIDS: Busan 30 is used to inhibit bacterial and fungal degradation of water-based and water-soluble or emulsifiable cutting fluids and coolants used in metalworking operations. It should be added to the cutting fluid at a rate that will provide 2.5 to 250 parts per million Busan 30 (weight/weight) after final dilution with water. Busan 30 can be added after the dilution or can be added to the concentrate before dilution at a rate of 125 to 1250 parts per million in order to provide the required concentration in the diluted fluid.

CAULKING-SEALANTS & WALLCOVERING ADHESIVES: For details on the use of Busan 30 for the protection of these materials, refer to the bulletin Busan 30 – Preservative for Caulking-Sealants and Vinyl Acetate Wallcovering Adhesives.
