1448-62

SEP 28 1992

Mr. Dennis L. Barbee
Buckman Laboratories, Inc.
1256 North McLean Boulevard
Memphis, TN 38108

Dear Mr. Barbee:

Subject: WSCP 20
EPA Registration No. 1448-62
Your Amendment Dated June 11, 1992

The amendment noted above requesting to amend the biocide use directions would be acceptable in connection with registration under the Federal Insecticide, Fungicide, and Rodenticide Act, as amended, subject to the comments listed below. A stamped copy is enclosed for your records. Five copies of the finished labeling must be submitted before you release the product for shipment bearing the amended labeling.

1. Under the First Aid heading, delete "... drink promptly a large quantity of milk, egg whites, gelatin solution, or if these are not available."
2. The ingredient statement must be placed on the front panel beneath the product name.

Future label amendments should clearly state the changes/additions proposed. This application only states "amended biocide use directions." However, you have added these use sites: exterior spas, decorative fountains, whirlpools, hot tubs and ponds.

If you have any further questions, please contact Ms. Barbara Pringle at (703) 305-6484.

Sincerely yours,

Ruth G. Douglas
Product Manager (32)
Antimicrobial Program Branch
Registration Division (H7505C)

WSCP 20

ACTIVE INGREDIENT
Polyoxyethylene
(dimethylamino)ethanol
INERT INGREDIENTS

**KEEP OUT OF REACH OF CHILDREN
CAUTION**

PRECAUTIONARY STATEMENTS HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION: Harmful if swallowed. Avoid breathing vapors. Avoid contact with skin, eyes, or clothing.
FIRST AID: If swallowed, drink promptly a large quantity of milk, egg whites, gelatin solution, or, if these are not available, drink large quantities of water. Avoid alcohol. Call a physician immediately.
ENVIRONMENTAL HAZARDS: This pesticide is toxic to fish. Keep out of lakes, streams, or ponds. Permits may be required for discharges containing this pesticide into lakes, streams, ponds, or public water. For guidance, contact the regional office of the Environmental Protection Agency.

STORAGE AND DISPOSAL

Do not contaminate water, food, or feed by storage or disposal.
STORAGE: Do not stack more than four drums high. Leaking or damaged drums should be placed in overpack drums for disposal. Spills should be absorbed in sawdust or sand and disposed of in a sanitary landfill. Keep container closed when not in use.
PESTICIDE DISPOSAL: Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility.
CONTAINER DISPOSAL:
PLASTIC: Triple rinse (or equivalent). Then offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, by incineration, or, if allowed by state and local authorities, by burning. If burned, stay out of smoke.
METAL: Triple rinse (or equivalent). Then offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or by other procedures approved by state and local authorities.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

WSCP 20 is used to control algae, bacteria, and fungi in recirculating commercial and industrial water cooling towers. Prior to its use, systems must be cleaned to remove algal growth, microbiological slime, and other deposits. An initial slug addition of 2.9 to 7.3 fluid ounces of WSCP 20 per 1000 gallons of water to provide a concentration of 24 to 60 parts per million of WSCP 20 based on the total weight of water in the system, is recommended. Repeat initial dosage until control is evident. Subsequent slug additions of 0.73 to 7.3 fluid ounces of WSCP 20 per 1000 gallons of water (6 to 60 parts per million of WSCP 20) should be employed every 2 to 5 days, or as needed. The frequency of addition depends upon the relative amount of bleedoff and the severity of the microbiological problem. Slug additions should be made in the sump of water cooling towers. WSCP 20 is used to control bacteria in industrial air-washing systems that maintain effective mist eliminating components. Prior to its use, systems should be cleaned to remove bacterial slime and other deposits. An initial slug dose of 11.1 to 18.3 fluid ounces of WSCP 20 per 1000 gallons of water is recommended. Repeat initial dosage until control is evident. Subsequent slug additions of 7.5 to 18.3 fluid ounces of WSCP 20 per 1000 gallons of water should be employed each 1 to 5 days, or as needed. The frequency of addition depends upon the relative amount of bleedoff and severity of the bacterial problem. Slug additions may be made to the sump or the water collection trays of the airwash systems.

WSCP 20 is used to control the growth of algae in swimming pools, exterior spas, whirlpools, hot tubs, decorative fountains and ponds that do not contain fish. For maximum effectiveness pools, spas, whirlpools, hot tubs, decorative fountains and ponds containing heavy growth of algae should be cleaned prior to using WSCP 20. For pools having just visible algae growth and add an additional dose of 37 to 56 fluid ounces of WSCP 20 per 10,000 gallons of water and remove settled algae debris by cleaning. For treatment of a freshly cleaned and filled pool add initially 20 to 37

fluid ounces of WSCP 20 per 10,000 gallons of water. Subsequent additions of 20 to 37 fluid ounces of WSCP 20 per 10,000 gallons of water should be made every 5 to 7 days after initial treatment. For treatment of a freshly cleaned and filled pool add initially 20 to 37 fluid ounces of WSCP 20 per 10,000 gallons of water. For treatment of a fresh pool or pond, add initially 2 to 4 fluid ounces of WSCP 20 per 1,000 gallons of water. WSCP 20 should be made every 5 to 7 days after initial treatment for maximum effectiveness. WSCP 20 will prevent growth of most algae during the off-season winter months. Pools and spas that have been properly treated, during the swimming season and are treated with WSCP 20 per 10,000 gallons of water. If at the end of swimming season pools have been treated with WSCP 20 per 10,000 gallons. It is necessary that a uniform distribution of algae be maintained for maximum effectiveness. If pool is not covered, it may be necessary to treat during the swimming season. WSCP 20 is compatible with those chemicals normally used to treat pools. WSCP 20 can be used in pools and spas treated with chlorine chemistry. WSCP 20 is compatible with chlorine chemistry normally required. However, do not mix WSCP 20 with concentrated chlorine.
