Re: NM-875-1, EPA Reg. No. 1448-115
Label correction

Dear Mr. Swindell:

The NM-875-1 (EPA Reg. # 1448-115) product label was inadvertently submitted, 26 February 2003, with the incorrect percentage for Disodium cyanodithioimidocarbonate. The previously submitted label stated 3.66% where as the correct label enclosed states 3.68%. The certification below addresses only the notification action.

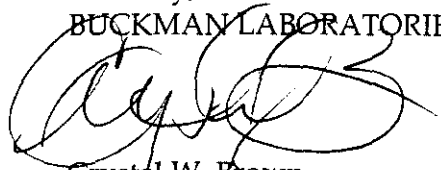

This notification is consistent with the provisions of PR Notice 98-10 and EPA regulations at 40 CFR 152.46, and no other changes have been made to the labeling or the confidential statement of formula of these products. I understand that it is a violation of 18 USC. § 1001 to willfully make any false statement to EPA. I further understand that if this notification is not consistent with the terms of PR Notice 98-10 and 40 CFR 152.46, this product may be in violation of FIFRA and I may be subject to enforcement action and penalties under sections 12 and 14 of FIFRA.

Enclosed please find the following information to support this request:

- Completed EPA Form 8570-1
- Five (5) copies of the draft labels for each product.

If you have any questions or require any additional information, please contact me at (901) 272-8258.

Sincerely,
BUCKMAN LABORATORIES INTERNATIONAL, INC.

COOLING WATER SYSTEMS: NM-875-11 is used to inhibit the growth of microorganisms in industrial, commercial, and institutional cooling water systems. In noticeably fouled systems, NM-875-11 should be added at a rate of 6.9 to 13.9 fl. oz. of NM-875-11 per 1000 gallons of system water (56-115 ppm) until control is evident. Subsequent additions of NM-875-11 should be made to the system as needed at a rate of 2.3 to 13.9 fl. oz. of NM-875-11 per 1000 gallons of system water (20-115 ppm) to maintain control. The frequency of treatment depends upon the severity of the microbiological problem. For best results, the system should be cleaned prior to treatment.

INDUSTRIAL WATER PURIFICATION SYSTEMS: NM-875-11 is used to control microbiological fouling in industrial water purification systems including reverse osmosis systems, filters, clarifiers, and ion exchange equipment. For off-line treatment, NM-875-11 should be fed at a concentration of 24.5 to 49.0 fl. oz. per 1000 gallons of water (200-400 ppm) for 4 to 8 hours. For on-line maintenance treatment, dosing of 4.9 to 9.8 fl. oz. NM-875-11 per 1000 gallons of water (40-80 ppm) for 6 to 12 hours should be made once a week or as needed to maintain control. **Not intended for use in potable water systems.**
