DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

LEATHER PRESERVATIVE:

Busan 116 is recommended for the prevention of mold, bacteria and fungi in the storage, transport and processing of wet leather stock such as pickled, vegetable-, chrome-, alternative metal or metal free tanned hides and skins.

Dosage rates of 0.01-0.3% (100 - 3,000 ppm) of white lime stock weight to prevent microbial growth on processed hides and skins. The dosage level used will depend on storage conditions and the length of protection required. A satisfactory dilution of 1 part Busan 116 plus 5 parts water can be prepared by adding the Busan 116 to water (as opposed to adding water to Busan 116) with agitation. The diluted product can then be added to the pickling liquor, or to the tanning liquor at the start of the tanning process or to the rinse water in a post tanning refloat. The product can also be applied during the fatliquoring process to prevent fungal growth at 0.025 - 0.075% (250 - 750 ppm) based on the split and shaved weight of leather being processed.

For preservation of leather finishing pastes and fatliquors, Busan 116 can be added at a dosage rate of 0.05 - 1% (500 - 10,000 ppm) based on the weight of the treated paste or fatliquor and mixed thoroughly to ensure adequate dispersion.
