WOOD TREATMENT BUSAN 1020W is a liquid used to control internal decay in poles, pilings, similar large timber members. Timber known to have internal decay should be scheduled for treatment before it has decayed to the point where replacement is necessary. A groundline area 40-inch circumference standing pole is taken as a guide and example for application of BUSAN 1020W. For interior decay, bore four to five holes 3/4-inch in diameter and a length about 2 1/2 times the radius of the wood at about a 45-degree angle downward. The first hole should be at the groundline and succeeding holes about 6 to 12 inches higher and 90 degrees rotated from the lower hole. Inject equal amounts of fumigant into all holes using a total of 1 pint per pole on average. Plug holes with treated wood plugs.
