It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Mix one gallon of weed killer per ten gallons of water. Use ten gallons mixed solution per 1000 sq. ft. of soil surface. Spray uniformly and thoroughly wet all foliage to insure contact action. Best results are obtained if used when weeds are just beginning to sprout and are growing rapidly.

Where vegetation is tall and dense, use 1 1/2 gallons in ten gallons of water, per 1000 sq. ft. For control of hard-to-kill perennial weeds and grasses such as Johnson grass, bindweed and wild carrot, use 3 to 4 1/2 gallons in ten gallons of water, per 1000 sq. ft.

Although it has considerable activity through foliage contact, much of this weed killer's activity is through the roots and therefore, adequate rainfall or watering is necessary.

Under conditions where the rainfall is high and the growing season long, a second application may be necessary to maintain a weed-free soil surface.
