DIRECTIONS

Shake before using. Use material undiluted in conventional fly spray gun. Repeat treatment as necessary. Note CAUTION. For best protection, start treatment before pests appear. Remove pets, birds and fish bowls from room before spraying.

FLIES, MOSQUITOS AND GNATS: For best results close up the infested area and fill it with mist. The space should be left closed for at least 10 minutes after treatment. It is frequently desirable to sweep up and destroy the fallen insects at the close of the 10 minute period.

CLOTHES MOTHS: Spray VERY THOROUGHLY all articles to be protected, paying particular attention to seams and folds. The interior surfaces of storage containers, such as closets and trunks, should also be thoroughly sprayed since it is important that all moth larvae that may be feeding on lint in the cracks be killed. Repeat application monthly unless treated articles are stored in a moth-tight container.

BEDBUGS: Spray bed and mattress thoroughly and repeatedly. The spray should also be directed into all cracks and hiding places about the bedroom, around baseboards, walls and floors.

ANTS: Spray into cracks and other hiding places and spray pests directly when possible. Be sure to treat ant trails and areas around door sills and window frames, where the pests enter the premises. Repeat application as necessary.

Use this product as a space spray in food processing plants only when plant is not in operation. Foods should be removed or covered during treatment. All food processing surfaces should be covered or thoroughly cleaned before using.

CAUTION: Prolonged contact of the concentrate material with the skin and eyes may cause irritation. Wash with plenty of soap and water. For eyes, get medical attention -- flush with water for fifteen minutes. Harmful if swallowed. Keep away from children.

CAUTION!

INFLAMMABLE: Do not pour, spill or store near fire or flames.
