HO 51

PREEN is a pre-emergent herbicide which provides long-lasting control of a wide range of annual grasses* and broadleaf weeds* by killing the seeds as they germinate (established growing weeds are not affected). Use around ornamental trees, shrubs, roses and all flowers and vegetables listed below. It can be applied directly to the soil surface or mixed into the soil for greater coverage. <u>Apply only at recommended rates (see table) and in accordance</u> with directions that follow. Will not harm plants under normal growing conditions if used as directed.

ESTABLISHED TREES, ORNAMENTALS, SHRUBS, ROSES AND FLOWERS

APPICATION TO SOIL SURFACE: Where mixing PREEN into the soil would be impractical, application can be made to the soil surface around established trees, shrubs, roses and the flowers listed below. First remove existing weeds, then apply PREEN to the soil surface at the rate of 1 lb.per 160 sq.ft. Next throughly soak the soil (either by rainfall or sprinkler) to activate the herbicide.

ESTABLISHED FLOWERS: Recommended for use on: Achillea, Ageratum, Arctotis, Aster, Balsam, Calendula, California Poppy, Calliopsis, Carnation, Centaurea, Chrysanthemum, Cosmos, Dahlia, Dianthus, Dimorphetheca, Forget-me-not, Four O'Clock, Gaillardia, Gladiolus**, Hollyhock, Ixoro (Coccinea), Lobilia, Lupines, Marigold, Morning Glory, Nasturtium, Nicotania, Periwinkle Petunia, Phlox, Portulaca, Rudbeckia, Salvia, Scabiosa, Shasta Daisy, Snapdragon, Stocks, Snow on the Mountain, Sunflower, Sweet Alyssum, Sweet Pea, Sweet William, Zinnia.

Do not use on ground cover as injury may occur. **Gladiolus corms less than 1" in diameter may be injured.

DIRECTIONS FOR MIXING INTO SOIL: Apply PREEN to established trees, ornamentals, roses and flowers that are 2 to 3 inches or more in height. Apply uniformly at the recommended rate. The rate of application varies with soil type. Use the table below to determine the proper rate for your type soil. Mix into the soil surface with hand rake being careful not to disturb the roots of established plants. Shallow cultivation during the growing season will not reduce effectiveness when PREEN has been adequately mixed into the soil. Remove all existing grasses and weeds prior to application since PREEN controls weeds from seed only.

VEGETABLES

Apply PREEN thoroughly and evenly at the recommended rates over the entire area. For large areas, use a seeder or broadcast applicator. Immediately after appication, mix into the soil to a depth of 1 to 3 inches using a roto tiller or hand rake. Mixing should be done in two directions, at right angles, to insure thorough mixing.
