Guaranteed Minimum Fertilizer Analysis:

Total Nitrogen.....	12%
Available Phosphoric Acid (P ₂ O ₅).....	16%
Soluble Potash (K ₂ O).....	8%

Potential acidity equivalent to 625 pounds of Calcium Carbonate per ton.

Active Ingredients:

trifluralin (a,a,a-trifluoro-2,6-dinitro-N,N-dipropyl-p-toluidine)..... .74%

Inert Ingredients..... 99.26%
(Relative to herbicidal content)

DIRECTIONS FOR USE

WHAT IT DOES: This lightweight, double action product (1) feeds with a 12-16-8 plant food, specially formulated for acid-loving evergreens, azaleas, and others, (2) prevents broadleaf and grassy weeds* from getting started in planting beds.

WHEN TO USE: Apply in spring as evergreen and shrub growth begins and before weeds become established. Make a second application about 4 weeks later for maximum weed control. Safe to apply to established evergreens, shrubs, other ornamental plants.

HOW TO USE: Follow directions exactly for best results.

1. Before application, remove all existing broadleaf and grassy weeds since product kills sprouting seeds, but will not kill weeds after they're established.
2. Spread as evenly as possible. Avoid missing small areas since weeds will grow in spots not covered by product.
3. Spread contents of this box over 400 sq. ft. of soil area. A second application should be made 4 weeks later for continued weed control. Or, spread one-half of contents of this box on 200 sq. ft. now and remaining contents on same area in 4 weeks. Working product into soil lightly gives maximum weed control and fertilizer activity.
4. After application, sprinkle shrubs lightly to remove any of the product from foliage. Peat moss or other mulches can be spread without reducing product's effectiveness.
