

Read all directions carefully before using.

PIPRON FOR THE CONTROL OF POWDERY MILDEW

PIPRON is a fungicide that is highly effective against powdery mildew-causing fungi attacking rose, lilac, tanh, phlox, zinnia, chrysanthemum, catalpa, and certain other ornamentals. Used as directed, PIPRON will not harm foliage or floral tissue of a wide variety of plants.

APPLICATION DIRECTIONS

PIPRON liquid concentrate is to be mixed with water and applied as a spray to the foliage of ornamental plants. Sufficient pressure should be used in spraying PIPRON to ensure thorough coverage of all plant surfaces. Special care should be taken to thoroughly wet new terminal growth and plant areas already diseased with powdery mildew.

Mixing. Pour the recommended amount of PIPRON into the spray tank during filling and mix thoroughly before spraying.

Rates and spraying schedule. To control powdery mildew, add ¼ pint of PIPRON liquid concentrate to each 100 gallons of water. For smaller amounts mix ½ ounce with 12 gallons of water. Begin spraying soon after the first leaves expand or the first symptoms of powdery mildew appear.

If powdery mildew is already present, make an initial application of ½ pint of PIPRON in 100 gallons of water. For smaller initial amounts mix ½ ounce with 6 gallons of water. Then follow with sprays of ¼ pint of PIPRON in 100 gallons of water every seven to ten days, or as needed.

CAUTION

May be harmful if swallowed. If swallowed, consult a physician. Avoid contact with skin and eyes. Wash thoroughly with soap and water after use. If splashed into eyes, wash with generous amounts of water. Do not contaminate foodstuffs, feeds, or fishponds.

The manufacturer makes no warranties, express or implied, concerning this product or its use which extend beyond the description on the label. All statements made concerning this product apply only when used as directed.
