TREFLAN FOR WEED CONTROL IN ONIONS

TREFLAN effectively controls certain annual grasses and broadleaf weeds in onions.

APPLICATION DIRECTIONS

Apply TREFLAN as a directed spray to the soil between the onion rows. Avoid spraying the onion tops or exposed bulbs.

BROADCAST RATES PER ACRE

Soil Texture	TREFLAN	
	E.C. or M.T.F. (pints)	PRO-5 (pints)
Coarse	3/4 - 1	0.6 - 0.8
Medium	1 - 1 1/4	0.8 - 1

For band applications, use proportionately less TREFLAN. Use the lower rates where light weed pressure is anticipated.

INCORPORATION DIRECTIONS

Soil incorporation may be accomplished by operating sweep-type or rolling cultivators 2 to 4 inches deep at 6 to 8 mph. Incorporation equipment must mix TREFLAN uniformly in the soil. Incorporate with two passes. The first pass must be within 24 hours of application or erratic weed control may result. Avoid covering exposed onion bulbs with treated soil during incorporation as injury to the crop may occur. Care should be taken to avoid injury to the roots during incorporation.
