

U.S. DEPARTMENT OF AGRICULTURE  
WASHINGTON, D. C. 20250

U.S. PAT. OFF. REG. NO. 1814-392

ACTIVE INGREDIENTS:	
Sulfur (not less than 95% thru 325 mesh screen)-----	95.00%
INERT INGREDIENTS:-----	5.00%
	<u>100.00%</u>

This sulfur dust is for the control of powdery mildew on lettuce; for the control of six-spotted mite and citrus red mite on citrus; for the control of desert red mite on cotton. For the control of powdery mildew on lettuce, application should be made at the rate of 20 to 30 pounds per acre. Begin applications on lettuce when symptoms first appear and continue treatments as additional control is needed. For the control of mites on citrus, it should be applied as the mites appear (avoiding application during or preceding high temperatures) at a rate of 60 to 75 pounds per acre. Do not apply within two months of any oil application. For the control of desert mite on cotton, it should be applied at a rate of 20 to 30 pounds per acre when the temperature ranges above 70° degrees F. Consult your state agricultural extension service for other uses of sulfur dust and directions for applying it.

C A U T I O N

Do not apply this dust to cucurbits and other sulfur sensitive crops. Avoid drift to these crops. Handlers and applicators must know that sulfur is inflammable and act accordingly, and too that it is extremely irritating to the eyes, and take due precautionary measures.
