TIM-BOR is an inorganic borate salt for the protection of lumber against fungal decay and wood destroying insects including:

Powder Post Borer	-
Common House Borer	•
Common Furniture Beetle	•
Two Tooth Longhorn	•
House Longhorn Beetle	•

TIM-BOR is not recommended for protection against termites.

DIRECTIONS FOR USE

Dip freshly sawn green lumber 4 to 5 times in a hot aqueous solution of TIM-BOR. After dipping, the lumber should be close-stacked and covered to prevent drying. Drying conditions will prevent diffusion from taking place. Diffusion of the TIM-BOR into the interior of wood will start immediately and will require from 4 to 10 weeks to thoroughly penetrate the lumber, depending on the thickness of the lumber.

TREATING CONDITIONS

Solution	Strength	Diffusion	Solution	Lumber
<u>lb./U.S. gal.</u>	Ib./Imp. gal.	Period	<u>Temperature</u>	Thickness
1.93	2.32	2-4 wks.	115 ⁰ F 46 ⁰ C	1 inch
3.83	4.62	6·10 wks.	135 ⁰ F 57 ⁰ C	3 inches

TIM-BOR is not recommended for use in treating lumber which will have contact with the soil or be exposed to leaching by weather.

IMPORTANT

TIM-BOR is capable of destroying all vegetation (grass, trees, etc), and therefore should not be spilled or dumped into areas underlain with roots of valuable vegetation.
