

As for Roaches, on ant trails if possible and directly into nests; on areas around door sills, window frames, water pipes, heat ducts, electrical outlets and base boards. Repeat as necessary to maintain effective control. When used outdoors, do not spray vegetation.

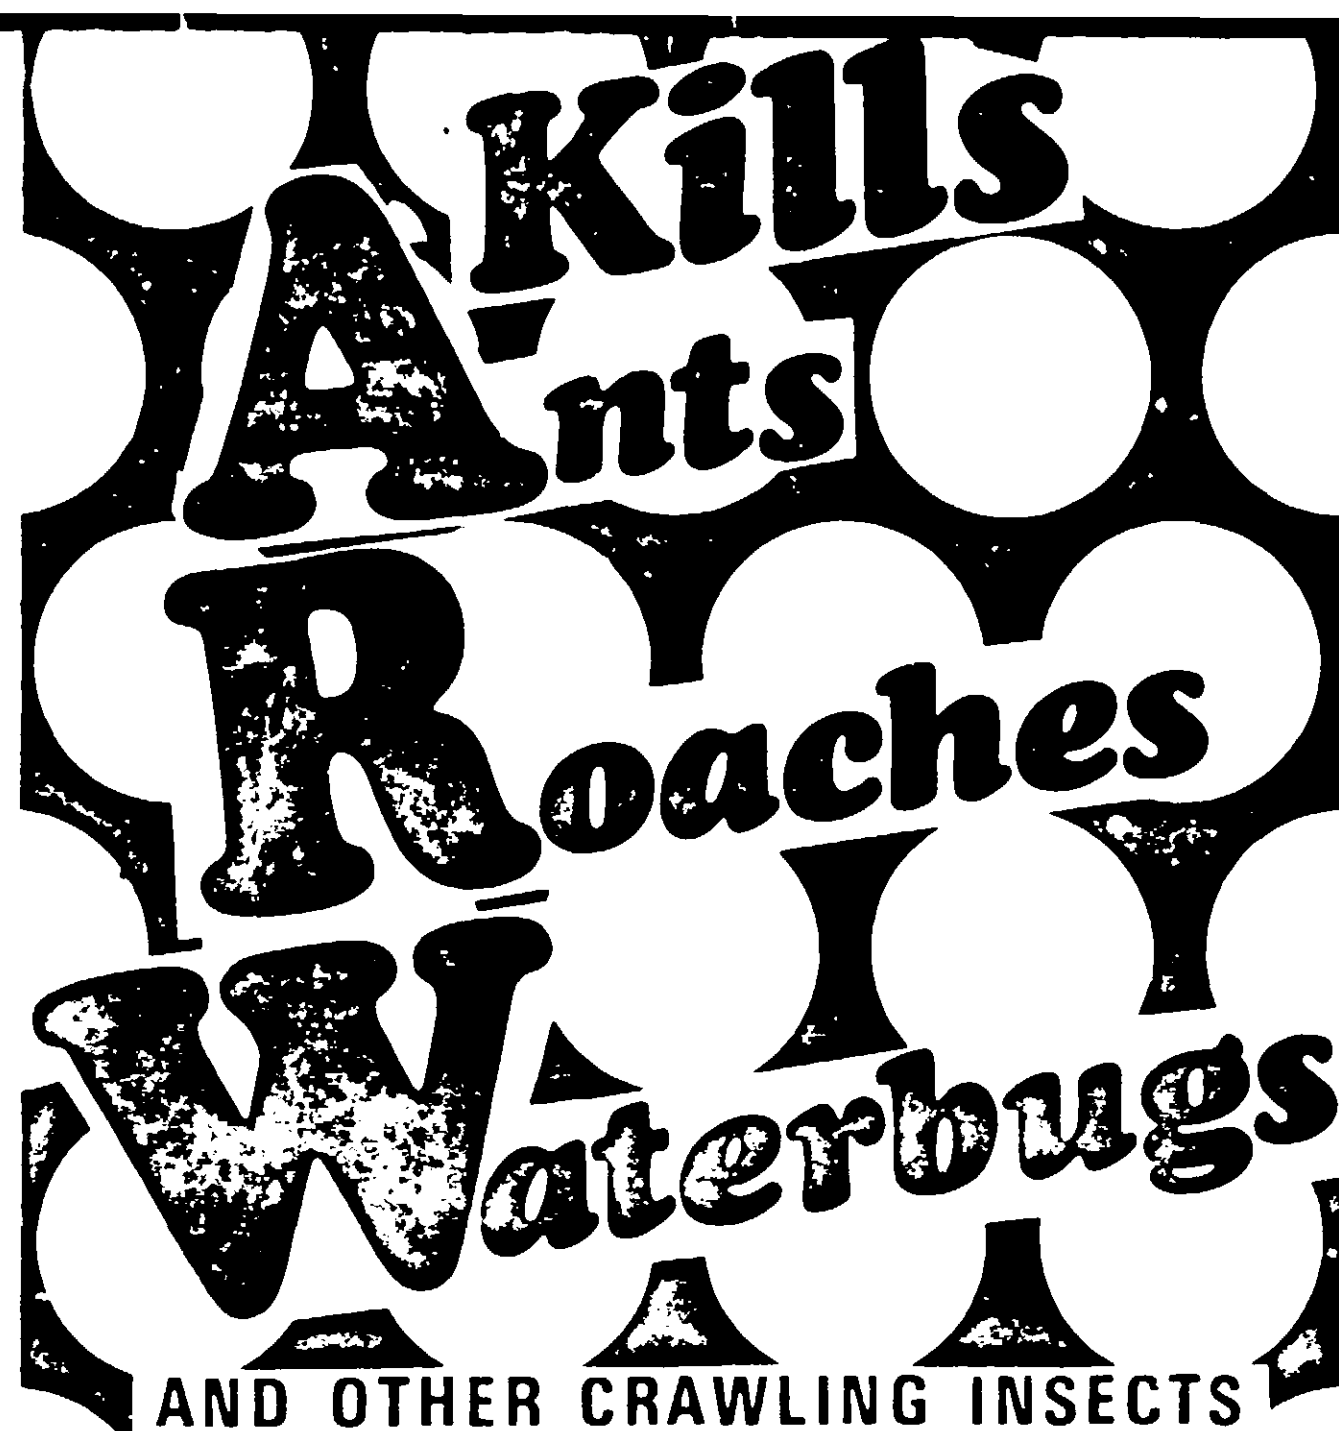

### ROACHES

Don't close up room. Never spray into air. Lift protective cap. Press trigger. Hold container so that spray is directed at the surface to be sprayed at a distance of 6 inches to 1 foot. All spraying to be on a spot basis. Spray until surface is wet usually at the rate of 1 to 2 feet per second. Spray directly on infested cracks, crevices, behind sinks, stove, refrigerator, etc. Make sure pilot light is off on stove or refrigerator. Let dry. Remove dishes from closet shelves, spray and let dry. Spray legs of table, let dry. This thorough application often is effective for considerable periods of time (2 to 6 weeks). Re-apply if reinfestation due to migration or other causes occurs. The residual coating left by the above treatment is not easily swept away. Nevertheless thorough house-cleaning with soap and water

removes film, so reapply after such cleaning.

### WATERBUGS

Silverfish, Spiders, Spray directly on insects if possible, or as for Roaches. Also on exposed pipes.
