A scientifically balanced Hormone-like preparation for the stimulation of strong, healthy roots.

For Use By Professional Nurseries Only.

DIRECTIONS FOR USE

**POWDER DIPPING PROCEDURE FOR
DIFFICULT TO ROOT HARD WOOD CUTTINGS**

Smooth stemmed cuttings should be slightly moistened before dipping in the powder to a depth that will cover the stem lightly to a point slightly higher than the cutting to be set in the sand or other medium. To remove excess powder, tap on the edge of the container.

Hormo Root powders are light and usually go further than other preparations. One pound should treat 35 to 40,000 average cuttings.

When using Hormo-Root powder it is desirable to have bottom heat preferably between 70-75°F. Treated cuttings should not have less than a 60°F. temperature. Any rooting medium may be used but a mixture of sand and peat has been found very satisfactory for most vegetative reproduction.
